Coding Theory Lecture Notes In Mathematics 201:

Use of Mathematical Literature A.R. Dorling, 2014-05-20 *Use of Mathematical Literature* discusses the bibliographic concerns of mathematical literature. The book is comprised of 14 chapters that cover characteristics of mathematical literature and provide reviews of some of the major literature in various mathematical fields. The text first discusses the role of the literature in mathematics and then proceeds to tackling major organizations, journals, and reference materials. Next, the book provides critical accounts of the major literature in various mathematical fields such as combinatorics, topology, and mathematical programming. The book will be of great use to students, practitioners, and researchers of mathematics. Other professionals handling math literature such as teachers, librarians, and translators will also find this book invaluable.

Designs and Their Codes E. F. Assmus, J. D. Key, 1994-01-06 A self-contained account suited for a wide audience describing coding theory, combinatorial designs, and their relations. [Basic Concepts in Information Theory and Coding](#) Solomon W. Golomb, Robert E. Peile, Robert A. Scholtz, 2013-03-09 *Basic Concepts in Information Theory and Coding* is an outgrowth of a one-semester introductory course that has been taught at the University of Southern California since the mid-1960s. Lecture notes from that course have evolved in response to student reaction, new technological and theoretical developments, and the insights of faculty members who have taught the course, including the three of us. In presenting this material, we have made it accessible to a broad audience by limiting prerequisites to basic calculus and the elementary concepts of discrete probability theory. To keep the material suitable for a one-semester course, we have limited its scope to discrete information theory and a general discussion of coding theory without detailed treatment of algorithms for encoding and decoding for various specific code classes. Readers will find that this book offers an unusually thorough treatment of noiseless self-synchronizing codes as well as the advantage of problem sections that have been honed by reactions and interactions of several generations of bright students while *Agent 00111* provides a context for the discussion of abstract concepts.

[Lattices and Codes](#) Wolfgang Ebeling, 2013 The purpose of coding theory is the design of efficient systems for the transmission of information. The mathematical treatment leads to certain finite structures: the error-correcting codes. Surprisingly, problems which are interesting for the design of codes turn out to be closely related to problems studied partly earlier and independently in pure mathematics. In this book, examples of such connections are presented. The relation between lattices studied in number theory and geometry and error-correcting codes is discussed. The book provides at the same time an introduction to the theory of integral lattices and modular forms and to coding theory. In the 3rd edition, again numerous corrections and improvements have been made, and the text has been updated. *Content: Lattices and Codes, Theta Functions, and Weight Enumerators, Even Unimodular Lattices, The Leech Lattice, Lattices over Integers of Number Fields, and Self-Dual Codes.* *Readership: Graduate Students in Mathematics and Computer Science, Mathematicians, and Computer Scientists.* *About the Author: Prof. Dr. Wolfgang Ebeling, Institute of Algebraic Geometry, Leibniz University Hannover, Germany.*

The International Commission on Mathematical Instruction, 1908-2008: People, Events, and Challenges in Mathematics Education Fulvia Furinghetti, Livia Giacardi, 2023-01-30 The book presents the history of ICMI through a prosopographical approach. In other words, it pays a lot of attention to the actors of the International movement. The portraits of the members of the ICMI Central Committees (1908, 1936) and ICMI Executive Committees (1952, 2008) and other eminent figures in ICMI history who have passed away in the first 100 years of its life are the guiding thread of the volume. Each portrait includes Biographical information, An outline of the various contributions made by the individual in question to the study of problems pertaining to mathematics teaching education, Primary bibliography, Secondary with particular attention to the publications concerning the teaching of mathematics, Images, photos, book frontispieces, relevant manuscripts. The authors of the portraits (30 altogether) are researchers in the history of mathematics, mathematics and mathematics education. The focus on the officer's role within ICMI and on his/her contributions to mathematics education make the portraits different from usual biographies. In particular, since most officers were active mathematicians, the portraits shed light on aspects of their lesser-known activity. Connecting chapters place the action of these figures in the historical context and in the different phases of ICMI history.

Geometry and Combinatorics Jaap J. Seidel, 1991

Boolean Functions for Cryptography and Coding Theory Claude Carlet, 2021-01-07 Boolean functions are essential to systems for secure and reliable communication. This comprehensive survey of Boolean functions for cryptography and coding covers the whole domain and all important results, building on the author's influential articles with additional topics and recent results. A useful resource for researchers and graduate students, the book balances detailed discussions of properties and parameters with examples of various types of cryptographic attacks that motivate the consideration of these parameters. It provides all the necessary background on mathematics, cryptography and coding and an overview on recent applications such as side channel attacks on smart cards, cloud computing through fully homomorphic encryption and local pseudo-random generators. The result is a complete and accessible text on the state of the art in single and multiple output Boolean functions that illustrates the interaction between mathematics, computer science and telecommunications.
