**The Cell Cycle and Development** Gregory R. Bock, Gail Cardew, Jamie A. Goode, 2001-06-29 This book brings together scientists working at the interface between the cell cycle cell growth and development in a variety of model systems and research paradigms The focus is on understanding how such diverse developmental inputs can modulate cell cycle regulation and reciprocally how a common way of regulating cell cycle progression can participate in different developmental strategies

*Cell Cycle in Development* Jacek Z. Kubiak, 2011-06-01 This book focuses on the intersection between cell cycle regulation and embryo development Specific modifications of the canonical cell cycle occur throughout the whole period of development and are adapted to fulfil functions coded by the developmental program Deciphering these adaptations is essential to comprehending how living organisms develop The aim of this book is to review the best known modifications and adaptations of the cell cycle during development The first chapters cover the general problems of how the cell cycle evolves while consecutive chapters guide readers through the plethora of such phenomena The book closes with a description of specific changes in the cell cycle of neurons in the senescent human brain Taken together the chapters present a panorama of species from worms to humans and of developmental stages from unfertilized oocyte to aged adult

**The Cell Cycle** David Owen Morgan, 2007 The Cell Cycle Principles of Control provides an engaging insight into the process of cell division bringing to the student a much needed synthesis of a subject entering a period of unprecedented growth as an understanding of the molecular mechanisms underlying cell division are revealed

**Cell Cycle Control** Tim Humphrey, Gavin Brooks, 2008-02-04 The fundamental question of how cells grow and divide has perplexed biologists since the development of the cell theory in the mid 19th century when it was recognized by Virchow and others that all cells come from cells In recent years considerable effort has been applied to the identification of the basic molecules and mechanisms that regulate the cell cycle in a number of different organisms Such studies have led to the elucidation of the central paradigms that underpin eukaryotic cell cycle control for which Lee Hartwell Tim Hunt and Paul Nurse were jointly awarded the Nobel Prize for Medicine and Physiology in 2001 in recognition of their seminal contributions to this field The importance of understanding the fundamental mechanisms that modulate cell division has been reiterated by relatively recent discoveries of links between cell cycle control and DNA repair growth cellular metabolism development and cell death This new phase of integrated cell cycle research provides further challenges and opportunities to the biological and medical worlds in applying these basic concepts to understanding the etiology of cancer and other proliferative diseases

**The Germ-cell Cycle in Animals** Robert William Hegner, 1914

**Developmental Aspects of the Cell Cycle** Ivan Cameron, 2012-12-02 Developmental Aspects of the Cell Cycle discusses the molecular organelle cellular and organismal

levels of cell cycle cell proliferation and cell differentiation It addresses the possible antagonism between the ability of cells to proliferate and to differentiate After brief historical theoretical and methodological background information for each cell system this book concentrates on the mechanisms involved in the regulation of cell proliferation and differentiation The book presents systems in which mass cultures of cells can be induced to undergo a synchronous transition from one cell state to another enabling the amplification of cellular and biochemical events to be analyzed with the available morphological and biochemical techniques Some chapters explain the possibility of cell state production by a microenvironment that occurs at the organismal level in which a series of mitotic and growth steps causes cells proliferation The concluding chapters discuss cell proliferation and differentiation in specific cell system such as embryonic chick and male germ cell This book will appeal to investigators in many disciplines teachers and life sciences students particularly to molecular cellular and developmental biologists

*Pamphlets on Protozoology (Kofoid Collection)*, 1911 *Studies on Germ Cells* Robert William Hegner, 1914 *Color Atlas of Embryology* Ulrich Drews, 1995 The color atlas presents the complex and fascinating field of embryology in an easy to understand fashion with the help of 176 beautiful didactically organized color plates Because medical students and biologists need different types of information topics relevant to each field have been clearly differentiated making it possible to learn in a focused and time saving manner The overview at the beginning of each section orients the reader quickly and provides a convenient study aid Interested readers not only physicians and biologists can delve into any number of topics from the basics of reproductive biology to general embryology including the hot topics related cellular and molecular biology

**Cell Cycle Control** Michele Pagano, 1998-06-08 Addressing the regulation of the eukaryotic cell cycle this book brings together experts to cover all aspects of the field clearly and unambiguously delineating what is commonly accepted in the field from the problems that remain unsolved It will thus appeal to a large audience basic and clinical scientists involved in the study of cell growth differentiation senescence apoptosis and cancer as well as graduates and postgraduates
