Cellular Computing Martyn Amos,2004-08-05 The completion of the first draft of the human genome has led to an explosion of interest in genetics and molecular biology The view of the genome as a network of interacting computational components is well established but researchers are now trying to reverse the analogy by using living organisms to construct logic circuits The potential applications for such technologies is huge ranging from bio sensors through industrial applications to drug delivery and diagnostics This book would be the first to deal with the implementation of this technology describing several working experimental demonstrations using cells as components of logic circuits building toward computers incorporating biological components in their functioning

Biomolecular Information Processing Evgeny Katz,2013-01-02 Edited by a renowned and much cited chemist this book covers the whole span of molecular computers that are based on biomolecules The contributions by all the major scientists in the field provide an excellent overview of the latest developments in this rapidly expanding area A must have for all researchers working on this very hot topic Perfectly complements Molecular and Supramolecular Information Processing also by Prof Katz and available as a two volume set

Cellular Image Processing Tao Yang,2001 Cellular operations will play a critical role in designing and programming nano scale computers In this book a cellular operation is defined as an operation which uses information within a neighbourhood to perform either local or global computational tasks Cellular operations can be used to solve complex and computation intensive problems such as parallel learning Cellular operations can also be used to simulate and explain different kinds of physical phenomena such as small world phenomena Since many cellular computational platforms such as cellular automata and cellular neural networks are proven to be as universal as the Turing machine cellular operations can be used to solve any computable problems in Turing sense Therefore a cellular computer based on cellular operations can serve as an all purpose computer The cellular image operators presented in this

book can help the design of image processing tasks for different hardware platforms based on either CPU or cellular processors This book also provides a powerful toolbox for designing cellular hardware platforms such as nano scale array processors and VLSI array processors automata and fuzzy cellular automata can be used to solve engineering problems On the other hand this book can help electrical engineers to design software for cellular computers based on either micro electronics or nano electronics This book can also serve as a handbook of parallel image processing for experts from the image processing community

Seminar on Computer Science ,2005 DNA Computing ,2001 Amorphous and Cellular Computing ,2001 The objective of this research is to create the architectural algorithmic and technological foundations for exploiting programmable materials These are materials that incorporate vast numbers of programmable elements that react to each other and to their environment Such materials can be fabricated economically provided that the computing elements are amassed in bulk without arranging for precision interconnect and testing In order to exploit programmable materials we must identify engineering principles for organizing and instructing myriad programmable entities to cooperate to robustly achieve pre established goals even though the individual entities are unreliable and interconnected in unknown irregular and time varying ways Progress in microfabrication and in bioengineering will make it possible to assemble such amorphous systems at almost no cost provided that 1 the units need not all work correctly 2 the units are identically programmed and 3 there is no need to manufacture precise geometrical arrangements of the units or precise interconnections among them
