Edward Everett Hale, 2022-10-18 Reproduction of the original Space Forces Fred Scharmen, 2021-11-09 The radical history of space exploration from the Russian Cosmists to Elon Musk Many societies have imagined going to live in space What they want to do once they get up there whether conquering the unknown establishing space colonies privatising the moon's resources reveals more than expected In this fascinating radical history of space exploration Fred Scharmen shows that often science and fiction have combined in the imagined dreams of life in outer space but these visions have real implications for life back on earth For the Russian Cosmists of the 1890s space was a place to pursue human perfection away from the Earth For others such as Wernher Von Braun it was an engineering task that combined in the Space Race the Cold War and during World War II with destructive geopolitics Arthur C Clark in his speculative books offered an alternative vision of wonder that is indifferent to human interaction Meanwhile NASA planned and managed the space station like an earthbound corporation Today the market has arrived into outer space and exploration is the plaything of superrich technology billionaires who plan to privatise the mineral wealth for themselves Are other worlds really possible Bringing these figures and ideas together reveals a completely different story of our relationship with outer space as well as the dangers of our current direction of extractive capitalism and colonisation
