David Parr, 2007 Most analyses of bridge hydraulics for flood flows are performed using the Army Corps of Engineers HEC RAS Hydrologic Engineering Centers River Analysis System computer program This study was carried out to compare results of HEC RAS bridge modeling with experiments performed in a laboratory flume The study was intended to add some insight into the effect of bridge hydraulic features such as ineffective flow regions weir overflow and flow through skewed bridges This insight should be useful for bridge engineers in HEC RAS bridge modeling endeavors A laboratory flume was constructed specifically for this project The flume cross section has a main channel region and relatively wide left and right overbank regions Different bridge scenarios

were modeled Froude number similarity was used to scale up model parameters and create prototype HEC RAS hydraulic models simulating laboratory model conditions Water surface profiles were compared for corresponding HEC RAS and laboratory results *Guide to Bridge Hydraulics*, 2004 For most people water under the bridge is something to shrug off and forget but civil engineers cannot afford to be quite so cavalier about it Members of a Transport Association of Canada project committee consider basic hydraulic considerations hydrological estimates waterway design and analysis scour protection and channel control and hydr [Guide to Bridge Hydraulics](#) Roads and Transportation Association of Canada.
