Services in the 21st Century makes biodiversity scenarios understandable relevant and valuable to stakeholders by using effective language and focused communication techniques Instead of merely showing the potential effects of global change on biodiversity scenarios should consider the feedback connecting environmental forces Biodiversity provides numerous essential environmental services crucial to human well being both now and in the future The climate is a critical component of ecosystem functioning and directly and indirectly affects human health The target audience includes biology and environmental science students and faculty scientists social workers who generate and collaborate on biodiversity scenarios policymakers and corporations with a basic science understanding

Threatened and Recently Extinct Vertebrates of the World Matthew Richardson,2023-03-09 Habitat loss and degradation are currently the main anthropogenic causes of species extinctions The root cause is human overpopulation This unique volume provides for the very first time a comprehensive overview of all threatened and recently extinct mammals birds reptiles amphibians and fishes within the context of their locations and habitats The approach takes a systematic examination of each biogeographic realm and region of the world both terrestrial and marine but with a particular emphasis on geographic features such as mountains islands and coral reefs It reveals patterns useful in biodiversity conservation helps to put it all into perspective and ultimately serves as both a baseline from which to compare subsequent developments as well as a standardization of the way threatened species are studied
