of the research agenda pursued in the collected papers The introduction selectively presents the main results of the papers and attempts to illustrate many of them in terms of a common and canonical example namely a single unit auction with interdependent values It is our hope that the use of this example facilitates the presentation of the results and that it brings the main insights within the context of an important economic mechanism namely the generalized second price auction

to the non confiscatority and can be dropped respectively for Nash implementation Thus we also give a full characterization for Nash implementation when endowments and preferences are both unknown to the designer
