

Breaking Wave

Polynesian Society (N.Z.)

Breaking Wave:

An Experimental Study of Breaking-wave Pressures William J. Garcia, 1968 Breaking Waves Michael L. Banner, Roger H.J. Grimshaw, 2012-12-06 Wave breaking is a commonly occurring phenomena associated with wave motion in fluids often inducing significant effects which are of fundamental and technological importance A familiar illustration is provided with white capping and microbreaking of the wind driven ocean surface waves which is believed to play an important part in the transfers of momentum mass and heat across the air sea interface as well as in the production of underwater ambient noise and augmented microwave backscatter The enhanced hydrodynamic forces associated with the breaking of the more energetic ocean wave components constitute a significant challenge in ocean engineering coastal engineering and naval architecture Other less conspicuous but equally important manifestations are the breaking of internal waves and the filamentation of vorticity interfaces Despite recent theoretical and observational progress towards a more complete understanding of wave breaking mathematical descriptions of its onset and consequences are presently lacking The aim of this Symposium was to bring together theoretical and observational expertise with the goal of determining the current state of knowledge of wave breaking and providing a stimulus to future research The Symposium focused on water waves of all scales from capillary waves to ocean swell but also considered internal waves and the filamentation of vorticity interfaces Specific topics included were Fundamental theoretical studies wave instabilities routes to breaking Models of wave breaking Field observations including statistical information Laboratory studies Shoaling waves breaking waves on currents breaking induced by the motion of a ship

Guide to Bridge Hydraulics Transportation Association of Canada, 2004 Basic hydraulic considerations Channel types and behaviour relation to bridges Basic hydraulic requirements Hydraulic design procedures Hydrologic estimates Statistical frequency analysis Runoff modeling Empirical methods High water levels and stage discharge relations Extreme floods and risk Scour protection and channel control Scour protection around bridge foundations Erosion protection of banks and slopes Design of rock riprap Channel control works Hydraulic aspects of construction inspection and maintenance Construction Inspection Maintenance Special problems Tidal crossings Inland basic crossings Waves and waves protection Physical modeling of bridge problems Alluvial fans Debris flow and torrents
