

Boolean Rings

- More formally, the tuple $\langle A, 0, 1, \#, \cdot \rangle$, where A any domain that includes two elements 0 and 1, is a boolean ring, if the following properties are satisfied

- Associativity

$$a \# (b \# c) = (a \# b) \# c \qquad a \cdot (b \cdot c) = (a \cdot b) \cdot c$$

- Comutativity

$$a \# b = b \# a \qquad a \cdot b = b \cdot a$$

- Distribution

$$a \# (b \cdot c) = (a \# b) \cdot (a \# c) \qquad a \cdot (b \# c) = a \cdot b \# a \cdot c$$

- Neutral Element

$$a \# 0 = a \qquad a \cdot 1 = a$$

- Exclusivity and Idempotence

$$a \# a = 0 \qquad a \cdot a = a$$

- Absorbing Element

$$a \cdot 0 = 0$$

Boolean Rings:

Boolean Rings Alexander Abian, 1976 Rings and Ideals Neal H. McCoy, 1948-12-31 This monograph presents an introduction to that branch of abstract algebra having to do with the theory of rings with some emphasis on the role of ideals in the theory Except for a knowledge of certain fundamental theorems about determinants which is assumed in Chapter VIII and at one point in Chapter VII the book is almost entirely self contained Of course the reader must have a certain amount of mathematical maturity in order to understand the illustrative examples and also to grasp the significance of the abstract approach However as far as formal technique is concerned little more than the elements of algebra are presupposed *The Theory of Near-Rings* Robert Lockhart, 2021-11-14 This book offers an original account of the theory of near rings with a considerable amount of material which has not previously been available in book form some of it completely new The book begins with an introduction to the subject and goes on to consider the theory of near fields transformation near rings and near rings hosted by a group The bulk of the chapter on near fields has not previously been available in English The transformation near rings chapters considerably augment existing knowledge and the chapters on product hosting are essentially new Other chapters contain original material on new classes of near rings and non abelian group cohomology The Theory of Near Rings will be of interest to researchers in the subject and more broadly ring and representation theorists The presentation is elementary and self contained with the necessary background in group and ring theory available in standard references **Non-Noetherian Commutative Ring Theory** S.T. Chapman, Sarah Glaz, 2000-10-31 This volume consists of twenty one articles by many of the most prominent researchers in non Noetherian commutative ring theory The articles combine in various degrees surveys of past results recent results that have never before seen print open problems and an extensive bibliography One hundred open problems supplied by the authors have been collected in the volume s concluding chapter The entire collection provides a comprehensive survey of the development of the field over the last ten years and points to future directions of research in the area Audience Researchers and graduate students the volume is an appropriate source of material for several semester long graduate level seminars and courses The Use of Ultraproducts in Commutative Algebra Hans Schoutens, 2010-07-31 Exploring ultraproducts of Noetherian local rings from an algebraic perspective this volume illustrates the many ways they can be used in commutative algebra The text includes an introduction to tight closure in characteristic zero a survey of flatness criteria and more *Advances in Ring Theory* Sergio R. López-Permouth, Dinh Van Huynh, 2011-01-28 This volume consists of refereed research and expository articles by both plenary and other speakers at the International Conference on Algebra and Applications held at Ohio University in June 2008 to honor S K Jain on his 70th birthday The articles are on a wide variety of areas in classical ring theory and module theory such as rings satisfying polynomial identities rings of quotients group rings homological algebra injectivity and its generalizations etc Included are also applications of ring theory to problems in coding theory and in linear algebra
