

# Normative Systems, Permission and Deontic Logic\*

---

KAZIMIERZ OPALEK AND JAN WOLEŃSKI

*Abstract.* The authors concentrate on the analysis of the concept of permission. After a general account of differing concepts of permission both with regard to different legal theories and to different legal ideologies, they argue in favour of a "radical" imperativism which leaves no place for permissive norms. Thus, in contrast with the logic of normative language (LNL) purported by Alchourrón and Bulygin, the authors figure out a system of deontic logic – supplemented by devices of the possible world semantics – according to which a normative system (N) is conceived as a set of logical consequences of a certain finite set of basic obligations and no room is left either for the concept of weak permission or for the concept of strong permission. Finally the authors raise some criticisms concerning the view maintained by Alchourrón and Bulygin on strong permission.\*

## 1.

The concept of permission analysed in deontic logic and/or in the logic of norms, corresponds, roughly speaking, to the concept of right investigated by the study of law; we omit here the problem of permission in ethics. One can certainly assume that the analysis of permission is to a great extent inspired by considerations of the study of law on the concept of right, although one has also to take into account the interest of logicians in the current normative discourse, one of the peculiarities of which is the use of such expressions, as "he has the right," "it is due to him," "he is entitled to," "he is allowed to," "he can," etc.

The study of law, theory and philosophy of law in particular, is engaged in considering certain problems concerning the concept of right, which are analogous to those dealt with in deontic logic and/or logic of norms with respect to permission, albeit – especially in the past – the conceptual analysis in the study of law was often substituted by considerations with an ideological-political tinge.

Logics for Databases and Information Systems Jan Chomicki, Gunter Saake, 2012-12-06 Time is ubiquitous in information systems Almost every enterprise faces the problem of its data becoming out of date However such data is often valuable so it should be archived and some means to access it should be provided Also some data may be inherently historical e g medical cadastral or judicial records Temporal databases provide a uniform and systematic way of dealing with historical data Many languages have been proposed for temporal databases among others temporal logic Temporal logic combines abstract formal semantics with the amenability to efficient implementation This chapter shows how temporal logic can be used in temporal database applications Rather than presenting new results we report on recent developments and survey the field in a systematic way using a unified formal framework GHR94 Ch094 The handbook GHR94 is a comprehensive reference on mathematical foundations of temporal logic In this chapter we study how temporal logic is used as a query and integrity constraint language Consequently model theoretic notions particularly for model satisfaction are of primary interest Axiomatic systems and proof methods for temporal logic GHR94 have found so far relatively few applications in the context of information systems Moreover one needs to bear in mind that for the standard linearly ordered time domains temporal logic is not recursively axiomatizable GHR94 so recursive axiomatizations are by necessity incomplete
