Ex: If $f(x) = 2x + 5$, $g(x) = x^2 - 1$, $h(x) = 5x - 3$

Prove that, (i) $f \circ g(3) \neq g \circ f(3)$ ✓

(ii) $(f \circ g) \circ h = f \circ (g \circ h)$ ✓

$$(i) f \circ g(3) = f[g(3)] = f[3^2 - 1] = f(8) = 2(8) + 5 \\ = 21 \dots \textcircled{1}$$

$$g \circ f(3) = g[f(3)] = g[2(3) + 5] = g(11) = 11^2 - 1 = 120$$

from ① and ②, $g \circ f(3) \neq f \circ g(3)$... ②

A Logical Approach to Discrete Math David Gries, Fred B. Schneider, 2013-03-14 This text attempts to change the way we teach logic to beginning students. Instead of teaching logic as a subject in isolation, we regard it as a basic tool and show how to use it. We strive to give students a skill in the propositional and predicate calculi and then to exercise that skill thoroughly in applications that arise in computer science and discrete mathematics. We are not logicians but programming methodologists, and this text reflects that perspective. We are among the first generation of scientists who are more interested in using logic than in studying it. With this text, we hope to empower further generations of computer scientists and mathematicians to become serious users of logic. Logic is the glue. Logic is the glue that binds together methods of reasoning in all domains. The traditional proof methods, for example, proof by assumption, contradiction, mutual implication, and induction, have their basis in formal logic. Thus, whether proofs are to be presented formally or informally, a study of logic can provide understanding.

Discrete Mathematics Oscar Levin, 2025 This book aims to provide an introduction to select topics in discrete mathematics at a level appropriate for first or second year undergraduate math and computer science majors. This course serves both as a survey of the topics in discrete math and as the bridge course for math majors. *Discrete Mathematics* Oscar Levin, 2018-07-30 Note: This is a custom edition of Levin's full *Discrete Mathematics* text, arranged specifically for use in a discrete math course for future elementary and middle school teachers. It is NOT a new and updated edition of the main text. This gentle introduction to discrete mathematics is written for first and second year math majors, especially those who intend to teach. The text began as a set of lecture notes for the discrete mathematics course at the University of Northern Colorado. This course serves both as an introduction to topics in discrete math and as the introduction to proof course for math majors. The course is usually taught with a large amount of student inquiry, and this text is written to help facilitate this. Four main topics are covered: counting sequences, logic, and graph theory. Along the way, proofs are introduced, including proofs by contradiction, proofs by induction, and combinatorial proofs. While there are many fine discrete math textbooks available, this text has the following advantages: It is written to be used in an inquiry-rich course. It is written to be used in a course for future math teachers. It is open source with low-cost print editions and free electronic editions.
