working from copies and working from nature Multitudes of private pupils do nothing but copy the work of others and consequently they never acquire the power to produce original work themselves The two methods may be combined but nature must always be regarded as the great instructor We can do no greater service to our pupils than to prepare them to learn from nature to open their eyes and minds to the harmonies and melodies which she has in ample store for them There is no department of public instruction better adapted to the development of the powers of observation than drawing from objects About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Sparkes,1911 [Elements of Mechanical Drawing](#) Alpha Pierce Jamison,1904 **The School Arts Magazine** Pedro Joseph Lemos,1912 **Sketch Your Stuff** Jon Stich,2017 Are you ready to draw but stuck for ideas on how to get started Sketch Your Stuff shows you how to turn the everyday objects that fill your home into subjects for your sketchbook Jon stich explains how to draw each item using a variety of methods Whether using simple shapes or a complete step by step drawing each object is simple clear and fun This book covers a range of topics from observation of shape and form to light and shade composition and perspective

The Drawing Teacher Harry Wallingford Jacobs,1928 *The Science and Art of Model and Object Drawing* Lucas Baker,2015-08-26 From the INTRODUCTION THE tendency of the American people to study art marks an era in our intellectual life Students of art multiply rapidly art schools are well filled and private teachers are in great demand All branches of art are receiving attention and especially the industrial department There are two sources of art instruction the teacher and nature There are also two methods of practice working from copies and working from nature Multitudes of private pupils do nothing but copy the work of others and consequently they never acquire the power to produce original work themselves The two methods may be combined but nature must always be regarded as the great instructor We can do no greater service to our pupils than to prepare them to learn from nature to open their eyes and minds to the harmonies and melodies which she has in ample store for them There is no department of public instruction better adapted to the development of the powers of observation than drawing from objects The art student in progressing through the various branches of his study is soon confronted with the necessity of making for himself original drawings from objects He cannot long follow copies and depend upon them for guidance he must read forms independently as he would read a book and he must give his own rendering of them At this stage he is presumed to have acquired a ready hand in drawing from the copy and to be in possession of some knowledge of Plane Geometry Thus prepared he enters upon a tour of investigation not

unlike the explorer of a new country He must note all the facts presented to his observation and deduce all the laws discoverable by his understanding To the student it is emphatically a field of discovery His eyes must be opened to new facts which have been hitherto unnoticed by him His method of seeing is to be changed from the casual and accidental to the accurate and discriminating method which penetrates and comprehends the subtleties of the apparent forms of objects and of light shade shadow reflections and color Every teacher of art knows that the principal part of his work is teaching his pupils to see and how to see The pupil begins with little knowledge of the apparent forms of objects and with no habit of observing them This knowledge must be acquired and the habit of seeing must be formed This is the only foundation for true progress In this respect to draw is to know and not to know is not to be able to draw The subject of Object Drawing has a basis of fact throughout There is no guess work mathematical precision pervades the whole every question can be settled by reference to fundamental principles Model drawing is the best possible preparation for sketching from nature The student graduating from the study of models goes fully equipped to the delineation of natural scenery or of architectural objects Without this preparation the results of his efforts would be uncertain and accurate only by accident It furnishes the scientific basis for free sketching and without it and an understanding of its principles no artist can count himself secure in his work
