

TEXTUAL ANALYSIS

Textual analysis is a method used to interpret and understand written or spoken language to gain an understanding of meanings produced through text.

OVERVIEW

Textual analysis involves examining the structure, content, and context of a text to uncover its underlying meanings, themes, and patterns. This process typically involves identifying key ideas, analyzing the rhetorical strategies employed, and considering the cultural, historical, and social factors that may have influenced the text's creation.

EXAMPLE

- **Analysis of policy documents:** A scholar could analyze the policy documents of public companies to determine the evolving ways in which they approach, define, and prioritize Environmental and Social Responsibility as a key value of the companies. This could involve methods like thematic coding and word frequency analysis.

Computation in Language Text Analysis Michael Mepham,1971 *Computation in Language Text Analysis* Michael Stephen Mepham,1973 *Computation in Language Text Analysis* Michael Mepham,1971 **Text Analysis with R** Matthew L. Jockers,Rosamond Thalke,2020-03-30 Now in its second edition *Text Analysis with R* provides a practical introduction to computational text analysis using the open source programming language R R is an extremely popular programming language used throughout the sciences due to its accessibility R is now used increasingly in other research areas In this volume readers immediately begin working with text and each chapter examines a new technique or process allowing readers to obtain a broad exposure to core R procedures and a fundamental understanding of the possibilities of computational text analysis at both the micro and the macro scale Each chapter builds on its predecessor as readers move from small scale microanalysis of single texts to large scale macroanalysis of text corpora and each concludes with a set of practice exercises that reinforce and expand upon the chapter lessons The book s focus is on making the technical palatable and making the technical useful and immediately gratifying *Text Analysis with R* is written with students and scholars of literature in mind but will be applicable to other humanists and social scientists wishing to extend their methodological toolkit to include quantitative and computational approaches to the study of text *Computation* provides access to information in text that readers simply cannot gather using traditional qualitative methods of close reading and human synthesis This new edition features two new chapters one that introduces dplyr and tidyr in the context of parsing and analyzing dramatic texts to extract speaker and receiver data and one on sentiment analysis using the syuzhet package It is also filled with updated material in every chapter to integrate new developments in the field current practices in R style and the use of more efficient algorithms

Aspects of Automatic Text Analysis Alexander Mehler,Reinhard Köhler,2007-06-24 The significance of natural language texts as the prime information structure for the management and dissemination of knowledge is as the rise of the web shows still increasing Making relevant texts available in different contexts is of primary importance for efficient task completion in academic and industrial settings Meeting this demand requires automatic form and content based processing of texts which enables to reconstruct or even to explore the dynamic relationship of language system text event and context type The rise of new application areas disciplines and methods e g text and web mining testify to the importance of this task Moreover the growing area of new media demands the further development of methods of text analysis with respect to their computational linguistic information theoretical and mathematical underpinning This book contributes to this task It collects contributions of authors from a multidisciplinary area who focus on the topic of automatic text analysis from several i e linguistic mathematical and information theoretical perspectives It describes methodological as well as methodical foundations and collects approaches in the field of text and corpus linguistics In this sense it contributes to the computational linguistic and information theoretical grounding of automatic text analysis *Natural Language*

Processing and Computational Linguistics Bhargav Srinivasa-Desikan,2018-06-29 Work with Python and powerful open source tools such as Gensim and spaCy to perform modern text analysis natural language processing and computational linguistics algorithms Key Features Discover the open source Python text analysis ecosystem using spaCy Gensim scikit learn and Keras Hands on text analysis with Python featuring natural language processing and computational linguistics algorithms Learn deep learning techniques for text analysis Book Description Modern text analysis is now very accessible using Python and open source tools so discover how you can now perform modern text analysis in this era of textual data This book shows you how to use natural language processing and computational linguistics algorithms to make inferences and gain insights about data you have These algorithms are based on statistical machine learning and artificial intelligence techniques The tools to work with these algorithms are available to you right now with Python and tools like Gensim and spaCy You ll start by learning about data cleaning and then how to perform computational linguistics from first concepts You re then ready to explore the more sophisticated areas of statistical NLP and deep learning using Python with realistic language and text samples You ll learn to tag parse and model text using the best tools You ll gain hands on knowledge of the best frameworks to use and you ll know when to choose a tool like Gensim for topic models and when to work with Keras for deep learning This book balances theory and practical hands on examples so you can learn about and conduct your own natural language processing projects and computational linguistics You ll discover the rich ecosystem of Python tools you have available to conduct NLP and enter the interesting world of modern text analysis What you will learn Why text analysis is important in our modern age Understand NLP terminology and get to know the Python tools and datasets Learn how to pre process and clean textual data Convert textual data into vector space representations Using spaCy to process text Train your own NLP models for computational linguistics Use statistical learning and Topic Modeling algorithms for text using Gensim and scikit learn Employ deep learning techniques for text analysis using Keras Who this book is for This book is for you if you want to dive in hands first into the interesting world of text analysis and NLP and you re ready to work with the rich Python ecosystem of tools and datasets waiting for you
