Computer Architecture Mehdi R. Zargham,1996 This text takes a two fold approach to provide a foundation for understanding and evaluating the design principles incorporated in modern computers and to present basic techniques for designing parallel systems and parallel algorithms

Computer Architecture Joseph D. Dumas II,2016-11-25 Not only does almost everyone in the civilized world use a personal computer smartphone and or tablet on a daily basis to communicate with others and access information but virtually every other modern appliance vehicle or other device has one or more computers embedded inside it One cannot purchase a current model automobile for example without several computers on board to do everything from monitoring exhaust emissions to operating the anti lock brakes to telling the transmission when to shift and so on Appliances such as clothes washers and dryers microwave ovens refrigerators etc are almost all digitally controlled Gaming consoles like Xbox PlayStation and Wii are powerful computer systems with enhanced capabilities for user interaction Computers are everywhere even when we don t see them as such and it is more important than ever for students who will soon enter the workforce to understand how they work This book is completely updated and revised for a one semester upper level undergraduate course in Computer Architecture and suitable for use in an undergraduate CS EE or CE curriculum at the junior or senior level Students should have had a course s covering introductory topics in digital logic and computer organization While this is not a text for a programming course the reader should be familiar with computer programming concepts in at least one language such as C C or Java Previous courses in operating systems assembly language and or systems programming would be helpful but are not essential

Computer Architecture Charles Fox,2024-05-07 Not since the 1980s has computer architecture been so exciting This book captures the moment mining the history of computing to teach key concepts in modern hardware design and introduce the neural and quantum architectures of the future Computer Architecture is an in depth exploration of the principles and designs that have shaped computer hardware through the ages from counting devices like the abacus to Babbage s Difference Engine to modern GPUs and the frontiers of quantum computing This engaging blend of history theory hands on exercises and real world examples is sure to make for an insightful romp through a fast changing world You won t just read about computer architecture you ll also gain the understanding to touch build and program it You ll explore the basic structures of a CPU by learning to program a Victorian Analytical Engine You ll extend electronic machines to 8 bit and 16 bit retro gaming computers learning to program a Commodore 64 and an Amiga You ll delve into x86 and RISC V architectures cloud and supercomputers and ideas for future technologies You ll also learn How to represent data with different coding schemes and build digital logic gates The basics of machine and assembly language programming How pipelining out of order execution and parallelism work in context The power and promise of neural networks DNA photonics and quantum computing Whether you re a student a professional or simply a tech enthusiast after reading this book you ll grasp the milestones of computer

Contributions to Autonomous Mobile Systems Andreas Graffunder,Rüdiger Hantsche,Irmfried Hartmann,Joerg Moebius,Zhiyun Ren,Matthias Boldin,Lutz Vietze,1992 Autonomous mobile systems AMS are systems capable of some mobility and equipped with advanced sensor devices in order to flexibly respond to changing environmental situations thus achieving some degree of autonomy The purpose of this book is to contribute to some essential topics in this broad research area related to sensing and control but not to present a complete design of an AMS Subjects concerning knowledge based control and decision such as moving around obstacles task planning and diagnosis are left for future publications in this series Research in the area of AMS has grown rapidly during the last decade see e g WAXMAN et al 87 DICKMANNNS ZAPP 87 The requirements of an AMS strongly depends on the desired tasks the system should execute its operational environment and the expected speed of the AMS For instance road vehicles obtain velocities of 10 m s and more therefore the processing of sensor data such as video image sequences has to be very fast and simple while indoor mobile robots deal with shorter distances and lower speeds thus more sophisticated techniques are applicable and as is done in our approach additional sensors can be integrated to allow for multi sensor processing **Proceedings of the ISMM International Conference: Parallel and Distributed Computing, and Systems** R.
