

Chapter 11

Hypergraph Computation for Computer Vision

Abstract In this chapter, the applications of hypergraph computation in computer vision are introduced. Computer vision is one of the most widely used areas of hypergraph computation. The hypergraphs can be constructed by modeling the high-order relationship among inter- or intra-visual samples, and then computer vision tasks can be solved by hypergraph computation procedures. More specifically, four typical applications, including visual classification, 3D object retrieval, and tag-based social image retrieval, are provided, in which hypergraphs are used to model high-order relationship among samples and solve visual problems by hypergraph computation. For example, in social image retrieval, hypergraphs are used to model the high-order relationship among social images based on both visual and textual information, which is the high-order modeling of elements within samples.

11.1 Introduction

Hypergraphs have demonstrated excellent performance in modeling high-order relationship of data and have been applied in several fields. In computer vision, this property of hypergraphs is also promising for a wide range of works, and many researches focus on how to use hypergraph modeling to solve visual problems. On one hand, hypergraphs can be used to model high-order relationship of images within a class or different classes, and then to conduct the hypergraph-based label propagation procedures, which is useful for visual classification and retrieval. On the other hand, the relation can be modeled within the elements in a visual object to exploit the structural information.

In this chapter, we discuss four typical applications of hypergraph computation in computer vision, i.e., visual classification [1–6], 3D object retrieval [2, 7–12], and tag-based social image retrieval [13–17]. In these applications, the vertices represent the visual objects, and a hypergraph is constructed to formulate the high-order correlations among all the samples by some metric. In this hypergraph, some vertices are labeled. The prediction of other vertices can be obtained by the label propagation procedure. Visual classification and retrieval problems can be solved by this method. The elements within one sample, such as pixels in an image, can

Optimal Traversal of Directed Hypergraphs International Computer Science Institute, Giorgio Ausiello, Giuseppe F. Italiano, Umberto Nanni, 1992 Abstract A directed hypergraph is defined by a set of nodes and a set of hyperarcs each of which connects a set of source nodes to a single target node Directed hypergraph are used in several contexts to model different combinatorial structures such as functional dependencies 20 Horn clauses in propositional calculus 6 AND OR graphs 17 Petri nets 18 A hyperpath similarly to the analogous notion of path in directed graphs consists of a connection among nodes using hyperarcs Unlike paths in graphs hyperpaths are suitable of different definitions of measure corresponding to different concepts arising in various applications
