The Computer and the Mind Philip Nicholas Johnson-Laird, 1988 In a field choked with seemingly impenetrable jargon Philip N Johnson Laird has done the impossible written a book about how the mind works that requires no advance knowledge of artificial intelligence neurophysiology or psychology The mind he says depends on the brain in the same way as the execution of a program of symbolic instructions depends on a computer and can thus be understood by anyone willing to start with basic principles of computation and follow his step by step explanations The author begins with a brief account of the history of psychology and the birth of cognitive science after World War II He then describes clearly and simply the nature of symbols and the theory of computation and follows with sections devoted to current computational models of how the mind carries out all its major tasks including visual perception learning memory the planning and control of actions deductive and inductive reasoning and the formation of new concepts and new ideas Other sections discuss human communication meaning the progress that has been made in enabling computers to understand natural language and finally the difficult problems of the conscious and unconscious mind free will needs and emotions and self awareness In an envoi the author responds to the critics of cognitive science and defends the computational view of the mind as an alternative to traditional dualism cognitive science integrates mind and matter within the same explanatory framework This first single authored introduction to cognitive science will command the attention of students of cognitive science at all levels including psychologists linguists computer scientists philosophers and neuroscientists as well as all readers curious about recent knowledge on how the mind works

Attractions of Thought Richard John Koscijew,2018-06-28 We began by perceiving the world through the lenses of symbolic categories to construct similarities and differences in terms of categorical oppositions and to organize our lives according to themes and narratives Living in this new symbolic universe the modern humans had a large compulsion to codify and then recodify their experiences to translate everything into representation and to seek out the deeper hidden logic that eliminates inconsistencies and ambiguities The appending presumption is that sometimes it is taken for granted as fact However its decisions are based on the fundamental principles whose assumptions are based on or upon the nature of which were presented by surmising of the one to one correspondence having to exist between every element of physical reality and physical theory This may serve to bridge the gap between mind and world for those who use physical theories But it also suggests that the Cartesian division is inseparably integrated and structurally real least of mention as impregnably formidable for physical reality as it is based on ordinary language That explains in no small part why the radical separation between mind and world as sanctioned by classical physics and formalized by Descartes yet it remains as philosophical postmodernism attests as one of the most pervasive features of Western intellectual thought
