*Computer Process Control* Teng-hui Lee, Gayle E. Adams, Warren M. Gaines, 1968      Process Dynamics and Control Dale E. Seborg, Thomas F. Edgar, Duncan A. Mellichamp, Francis J. Doyle, III, 2016-09-13 The new 4th edition of Seborg's *Process Dynamics Control* provides full topical coverage for process control courses in the chemical engineering curriculum emphasizing how process control and its related fields of process modeling and optimization are essential to the development of high value products A principal objective of this new edition is to describe modern techniques for control processes with an emphasis on complex systems necessary to the development design and operation of modern processing plants Control process instructors can cover the basic material while also having the flexibility to include advanced topics      *New Technical Books* New York Public Library, 1968      **Handbook of Separation Process Technology** Ronald W. Rousseau, 1987-05-13 Surveys the selection design and operation of most of the industrially important separation processes Discusses the underlying principles on which the processes are based and provides illustrative examples of the use of the processes in a modern context Features thorough treatment of newer separation processes based on membranes adsorption chromatography ion exchange and chemical complexation Includes a review of historically important separation processes such as distillation absorption extraction leaching and crystallization and considers these techniques in light of recent developments affecting them      **Statistical Approaches With Emphasis on Design of Experiments Applied to Chemical Processes** Valter Silva, 2018-03-07 Optimized operating conditions for complex systems can be attained by using advanced combinations of numerical and statistical methodologies One of the most efficient and straightforward solutions relies on the application of statistical methods with an emphasis on the design of experiments DoEs Throughout the book the design and analysis of experiments are conducted involving several approaches namely Taguchi response surface methods statistical correlations or even fractional factorial and model based evolutionary operation designs This book not only presents a theoretical overview about the different approaches but also contains material that covers the use of the experimental analysis applied to several chemical processes Some chapters highlight the use of software products to assist experimenters in both the design and analysis stages It helps graduate students teachers researchers and other professionals who are interested in chemical process optimization and also provides a good basis of theoretical knowledge and valuable insights into the technical details of these tools as well as explains common pitfalls to avoid The world's leading pharmaceutical companies and local governments are trying to achieve their eradication      Advanced Control of Chemical Processes 1994 D.
