Guide to Teaching Computer Science Orit Hazzan, Noa Ragonis, Tami Lapidot, 2026-01-29 This concise yet thorough textbook presents an active learning model for the teaching of computer science. Offering both a conceptual framework and detailed implementation guidelines, the work is designed to support a Methods of Teaching Computer Science (MTCS) course but may be applied to the teaching of any area of computer science at any level from elementary school to university. This text is not limited to any specific curriculum or programming language but instead suggests various options for lesson and syllabus organization. Fully updated and revised, the third edition features more than 40 new activities, bringing the total to more than 150, together with new chapters on computational thinking, data science, and soft concepts and soft skills. This edition also introduces new conceptual frameworks for teaching, such as the MERge model, and new formats for the professional development of computer science educators. Topics and features include an extensive set of activities to further support the pedagogical principles outlined in each chapter, discusses educational approaches to computational thinking, how to address soft concepts and skills in a MTCS course, and the pedagogy of data science. NEW focuses on teaching methods, lab-based teaching, and research in computer science education, as well as on problem-solving strategies, examines how to recognize and address learners' misconceptions, and the different types of questions teachers can use to vary their teaching methods. Provides coverage of assessment, teaching planning, and designing a MTCS course, reviews high school teacher preparation programs, and how prospective teachers can gain experience in teaching computer science. This easy-to-follow textbook and teaching guide will prove invaluable to computer science educators within all frameworks, including university instructors and high school teachers, as well as to instructors of computer science teacher preparation programs. **Writing**

Posthumanism, Posthuman Writing Sidney I. Dobrin, 2015-05-01 Writing Posthumanism Posthuman Writing is designed to spark conversation. It is intended to highlight the growing importance of posthumanist approaches to writing studies and, in doing so, works to solidify the importance of such work to the future of writing studies. Its organizational structure, length, and approach serve this agenda, working as much to encourage a growing conversation as it does to provide substantial original work from which such conversations might emerge. The thirteen original essays that comprise Writing Posthumanism

Posthuman Writing are organized to provide a progression from articles that introduce theoretical concepts regarding the intersections of posthumanism and writing to works that examine specific contexts as vehicles for developing posthumanist theories. *Introduction to Computing and Programming in Python, Global Edition* Mark Guzdial, Mark J.
