Biometrics John Woodward, Nicholas M. Orlans, Peter T. Higgins, 2003-01-09. Discover how to make biometrics the technology involving scanning and analyzing unique body characteristics and matching them against information stored in a database, a part of your overall security plan with this hands-on guide. Includes deployment scenarios, cost analysis, privacy issues, and much more. Biometric Technology for Human Identification, 2007. Handbook of Biometrics Anil K. Jain, Patrick Flynn, Arun A. Ross, 2007-10-23. Biometrics is a rapidly evolving field with applications ranging from accessing one's computer to gaining entry into a country. The deployment of large-scale biometric systems in both commercial and government applications has increased public awareness of this technology. Recent years have seen significant growth in biometric research, resulting in the development of innovative sensors, new algorithms, enhanced test methodologies, and novel applications. This book addresses this void by inviting some of the prominent researchers in Biometrics to contribute chapters describing the fundamentals as well as the latest innovations in their respective areas of expertise. **Proceedings of the International Workshop on Computational Intelligence in Security for Information Systems CISIS 2008** Emilio Corchado, Rodolfo Zunino, Paolo Gastaldo, 2008-10-24. The research scenario in advanced systems for protecting critical infrastructures and for deeply networked information tools highlights a growing link between security issues and the need for intelligent processing abilities in the area of information systems. To face the ever-evolving nature of cyber threats, monitoring systems must have adaptive capabilities for continuous adjustment and timely effective response to modifications in the environment. Moreover, the risks of improper access pose the need for advanced identification methods, including

protocols to enforce computer security policies and biometry related technologies for physical authentication Computational Intelligence methods offer a wide variety of approaches that can be fruitful in those areas and can play a crucial role in the adaptive process by their ability to learn empirically and adapt a system's behaviour accordingly The International Workshop on Computational Intelligence for Security in Information Systems CISIS proposes a meeting ground to the various communities involved in building intelligent systems for security namely information security data mining adaptive learning methods and soft computing among others The main goal is to allow experts and researchers to assess the benefits of learning methods in the data mining area for information security applications The Workshop offers the opportunity to interact with the leading industries actively involved in the critical area of security and have a picture of the current solutions adopted in practical domains This volume of Advances in Soft Computing contains accepted papers presented at CISIS 08 which was held in Genova Italy on October 23rd 24th 2008

Multibiometric Systems Karthik Nandakumar, 2008

Multibiometric systems are gaining popularity because they are able to overcome limitations such as non universality noisy sensor data and susceptibility to spoof attacks common in unibiometric systems We address two critical issues in the design of a multibiometric system namely fusion methodology and template security We propose a fusion methodology based on the Neyman Pearson theorem for combination of match scores provided by multiple biometric matchers The likelihood ratio LR test used in the Neyman Pearson theorem directly maximizes the genuine accept rate GAR at any desired false accept rate FAR We extend the likelihood ratio based fusion scheme to incorporate the quality of the biometric samples The LR framework can be used for designing sequential multibiometric systems by constructing a binary decision tree classifier based on the marginal likelihood ratios of the individual matchers The use of image quality information further improves the GAR to 90% at a FAR of 0.001% Next we show that the proposed likelihood ratio based fusion framework is also applicable to a multibiometric system operating in the identification mode We investigate rank level fusion strategies and propose a hybrid scheme that utilizes both ranks and scores to perform fusion in the identification scenario Fusion of multiple biometric sources requires storage of multiple templates for the same user corresponding to the individual biometric sources Template security is an important issue because stolen biometric templates cannot be revoked We propose a scheme for securing multibiometric templates as a single entity using the fuzzy vault framework We have developed fully automatic implementations of a fingerprint based fuzzy vault that secures minutiae templates and an iris cryptosystem that secures iris code templates We also demonstrate that a multibiometric vault achieves better recognition performance and higher security compared to a unibiometric vault
