*Cranial Computerized Tomography* W. Lanksch, 1976      *Cranial Computerized Tomography* T. Grumme, W. Lanksch, F. Marguth, E. Kazner, H. R. Müller, H. Steinhoff, S. Wende, 2012-12-06 Only a few years following its original development by the English physicist G N HOUNSFIELD cranial computerized tomography has proved to be of revolutionary importance for the diagnosis of brain disorders This is reflected not last by the almost immediate and worldwide acceptance of this diagnostic method Meanwhile computerized tomography has in addition led to a considerably improved diagnosis of lesions within the orbital region With the technically advanced systems of the second generation that will soon be available the method can also be applied to the study of pathological processes of the facial region of the skull and the neck as well Finally although at present still at the stage of clinical investigation the whole body scanning system will enable investigation of all parts of the body Stimulated by the successful 1st and 2nd International Symposium on Computerized Tomography held in Hamilton Bermuda in arch 1975 and in San Juan Puerto Rico in April 1976 we organized a meeting on cranial computerized tomography which took place in unich June 10 to 12 1976 It was the aim of this symposium to provide basic information as well as to exchange the experiences with the new method      **Manual of Cranial Computerized Tomography** N. Meese, J. Schramm, H. Steinhoff, 2012-12-06 The current book represents a distillation of the experience gained in diagnosis of intracranial tumors with computed X ray tomography at the University Hospitals of Berlin Mainz and München To what purpose Standard radiological techniques such as pneumoencephalography with lumbar puncture and cerebral arteriography with puncture of the common carotid artery are invasive procedures which entail a certain amount of risk as well as discomfort for the patient Furthermore diagnoses made with these procedures rely primarily on indirect signs of an intracranial space occupying lesion such as displacement of the air filled ventricles or of normal cerebral vessels Only a few types of tumor are demonstrated directly with these techniques In contrast computed tomography demonstrates the pathology directly in almost all cases and this with a minimum of risk and discomfort In addition normal intracranial structures are demonstrated so that the tumor's effect on its surroundings can be evaluated Today almost a decade after HOUNSFIELD'S revolutionary invention diagnosis of brain tumors without computed tomography is almost unthinkable if not in fact irresponsible      **Pediatric Cranial Computed Tomography** Hiroshi Yamada, 1983      **Cranial Computed Tomography** Seungho Howard Lee, Krishna C.
