Detecting Patterns 3:

Local Pattern Detection Katharina Morik, Jean-Francois Boulicaut, Arno Siebes, 2005-07-11 Introduction The dramatic increase in available computer storage capacity over the last 10 years has led to the creation of very large databases of scientific and commercial information The need to analyze these masses of data has led to the evolution of the new field knowledge discovery in databases KDD at the intersection of machine learning statistics and database technology Being interdisciplinary by nature the field offers the opportunity to combine the expertise of different fields into a common objective Moreover within each field diverse methods have been developed and justified with respect to different quality criteria We have to investigate how these methods can contribute to solving the problem of KDD Traditionally KDD was seeking to find global models for the data that explain most of the instances of the database and describe the general structure of the data Examples are statistical time series models cluster models logic programs with high coverage or classification models like decision trees or linear decision functions In practice though the use of these models often is very limited because global models tend to find only the obvious patterns in the data which domain experts already are aware of What is really of interest to the users are the local patterns that deviate from the already known background knowledge David Hand who organized a workshop in 2002 proposed the new field of local patterns

Real-Time Detection of Lines and Grids Adam Herout, Markéta Dubská, Jiří Havel, 2012-09-22 This text provides a survey of the latest research into the Hough transform for line detection and its contemporary developments Written with students in mind this work can serve as a condensed textbook and as a reference for practitioners working in computer vision The text also presents an overview and detailed elaboration of recent research related to PCLines a line parameterization based on parallel coordinates A detailed analysis of the concept is given including implementation details and measurements One chapter discusses the detection of chessboard like patterns and sets of parallel lines and lines coincident with one vanishing point a topic with many applications such as 2D barcodes aerial images and architecture recognition The work summarizes recent research in the field and analyses new advances achieved using the PCLines parameterization
