Detection of Changes in Random Processes Laimutis Telksnys,1986-10-24 <u>Detection of Changes in Random Processes</u> L. Tel'ksnis,1986 <u>Econometrics of Structural Change</u> Walter Krämer,2012-12-06 Econometric models are made up of assumptions which never exactly match reality Among the most contested ones is the requirement that the coefficients of an econometric model remain stable over time Recent years have therefore seen numerous attempts to test for it or to model possible structural change when it can no longer be ignored This collection of papers from Empirical Economics mirrors part of this development The point of departure of most studies in this volume is the standard linear regression model Yt x fJt U t I 1 t where notation is obvious and where the index t emphasises the fact that structural change is mostly discussed and encountered in a time series context It is much less of a problem for cross section data although many tests apply there as well The null hypothesis of most tests for structural change is that fJt fJo for all t i e that the same regression applies to all time periods in the sample and that the disturbances u are well behaved The well known Chow test for instance assumes t that there is a single structural shift at a known point in time i e that fJt fJo t <u>Nonparametric Methods in Change Point Problems</u> E. Brodsky,B.S. Darkhovsky,2013-03-14 The explosive development of information science and technology puts in new problems involving statistical data analysis These problems result from higher re quirements concerning the reliability of statistical decisions the accuracy of math ematical models and the quality of control in complex systems A new aspect of statistical analysis has emerged closely connected with one of the basic questions of cynergetics how to compress large volumes of experimental data in order to extract the most valuable information from data observed De tection of large homogeneous segments of data enables one to identify hidden regularities in an object s behavior to create mathematical models for each seg ment of homogeneity to choose an appropriate control etc Statistical methods dealing with the detection of changes in the characteristics of random processes can be of great use in all these problems These methods have accompanied the rapid growth in data beginning from the middle of our century According to a tradition of more than thirty years we call this sphere of statistical analysis the theory of change point detection During the last fifteen years we have witnessed many exciting developments in the theory of change point detection New promising directions of research have emerged and traditional trends have flourished anew Despite this most of the results are widely scattered in the literature and few monographs exist A real need has arisen for up to date books which present an account of important current research trends one of which is the theory of non parametric change point detection **Adaptive Systems in Control and Signal Processing 1986** K.J. Aström,B. Wittenmark,2016-07-21 This second IFAC workshop discusses the variety and applications of adaptive systems in control and signal processing The various approaches to adaptive control systems are covered and their stability and adaptability analyzed The volume also includes papers taken from two poster sessions to give a concise and comprehensive overview treatment of this increasingly important field **Robust algorithms for detecting**

a change in a stochastic process with infinite memory P. Papantoni-Kazakos,1988 The authors present and discuss a class of continuous operations on the family of discrete time stochastic processes which serves as a guide to construct qualitatively robust operations for a given class of processes namely the one induced by a nominal process and a substitutive contaminating process The results are general enough to help develop any robust statistical procedure but the authors have concentrated their attention on detection of a change from one class of processes to another disjoint class of processes while both classes consist of not necessarily Markov processes and satisfy certain mixing conditions in addition to stationarity and ergodicity Two quantitative measures of robustness breakdown point and influence functions are also developed for few examples KR   **Analytical Network and System Administration** Mark Burgess,2012-12-17 Network and system administration usually refers to the skill of keeping computers and networks running properly But in truth the skill needed is that of managing complexity This book describes the science behind these complex systems independent of the actual operating systems they work on It provides a theoretical approach to systems administration that saves time in performing common system administration tasks allows safe utilization of untrained and trained help in maintaining mission critical systems allows efficient and safe centralized network administration Managing Human Computer Networks Will show how to make informed analyses and decisions about systems how to diagnose faults and weaknesses Gives advice guidance as to how to determine optimal policies for system management Includes exercises that illustrate the key points of the book The book provides a unique approach to an old problem and will become a classic for researchers and graduate students in Networking and Computer Science as well as practicing system managers and system administrators   **Advances in Computer Science for Engineering and Education IV** Zhengbing Hu,Sergey Petoukhov,Ivan Dychka,Matthew He,2021-07-21 This book comprises high quality refereed research papers presented at the Fourth International Conference on Computer Science Engineering and Education Applications ICCSEEA2021 held in Kyiv Ukraine on January 23 24 2021 organized jointly by the National Technical University of Ukraine Igor Sikorsky Kyiv Polytechnic Institute National Aviation University and the International Research Association of Modern Education and Computer Science The topics discussed in the book include state of the art papers in computer science artificial intelligence engineering techniques genetic coding systems deep learning with its medical applications and knowledge representation with its applications in education It is an excellent source of references for researchers graduate students engineers management practitioners and undergraduate students interested in computer science and their applications in engineering and education   **FUSION ...** ,2000   **Identification and System Parameter Estimation** Pieter Eykhoff,1973   **Current Index to Statistics, Applications, Methods and Theory** ,1999 The Current Index to Statistics CIS is a bibliographic index of publications in statistics probability and related fields   **Proceedings** ,1995   **Automation and Remote Control** ,1987   **Proceedings of the ...
