

Piaget's Cognitive Development Theory

Sensorimotor (0-2 years)

Infants explore the world through senses and movement, developing object permanence - understanding objects exist even when unseen.

Preoperational (2-7 years)

Children begin to think symbolically, using language and imagination, but their thinking is intuitive, egocentric, and lacks logical reasoning.

Concrete operational (7-11 years)

Children start thinking logically about concrete events, grasping conservation (understanding quantity remains constant despite shape changes), and become less egocentric.

Formal operational (11+ years)

Adolescents develop abstract and hypothetical reasoning, able to think logically about possibilities, concepts, and future scenarios.

Theory and Practice of Dialogical Community Development Peter Westoby, Gerard Dowling, 2013-07-18

This book proposes that community development has been increasingly influenced and co-opted by a modernist soulless rational philosophy reducing it to a shallow technique for solving community problems. In contrast, this dialogical approach re-maps the ground of community development practice within a frame of ideas such as dialogue, hospitality, and depth. For the first time, community development practitioners are provided with an accessible understanding of dialogue and its relevance to their practice, exploring the contributions of internationally significant thinkers such as P. Freire, M. Buber, D. Bohm, and H. G. Gadamer, J. Derrida, G. Esteva, and R. Sennett. What makes the book distinctive is that first it identifies a dialogical tradition of community development and considers how such a tradition shapes practice within contemporary contexts and concerns economic, social, political, cultural, and ecological. Second, the book contrasts such an approach with technical and instrumental approaches to development that fail to take complex systems seriously. Third, the approach links theory to practice through a combination of storytelling and theory reflection, ensuring that readers are drawn into a practice theory that they feel increasingly confident has been tried and tested in the world over the past 25 years.

Development Theory and Practice in a Changing World Pádraig Risteard Carmody, 2019

Taking a critical and historical view, this text explores the theory and changing practice of international development. It provides an overview of how the field has evolved and the concrete impacts of this on the ground on the lives of people in the Global South. *Development Theory and Practice in a Changing World* covers the major theories of development such as modernisation and dependency, in addition to anti-development theories such as post-modernism and decoloniality. It examines the changing nature of immanent structural conditions of development in addition to the main attempts to steer them. The book suggests that the era of development as a hegemonic idea and practice may be coming to an end at the same time as it appears to have achieved its apogee in the Sustainable Development Goals, as a result of the rise of ultra-nationalism around the world, the increasing importance of securitisation, and the existential threat posed by climate change. Whether development can or should survive as a concept is interrogated in the book. This book offers a fresh and updated take on the past 60 years of development and is essential reading for advanced undergraduate students in areas of development, geography, international studies, political science, economics, and sociology.
