**XPS-99: Knowledge-Based Systems - Survey and Future Directions** Frank Puppe, 2005-11-20 A special year like 1999 invites one to draw a balance of what has been achieved in the roughly 30 years of research and development in knowledge based systems still abbreviated as XPS following the older term expert systems and to take a look at th what the future may hold For the 5 German conference on knowledge based systems we therefore asked current and former speakers of the four working groups FG s in the subdivision of knowledge based systems FA 1 5 of the German association of Informatics GI to present a survey of and future prospects for their respective fields knowledge engineering diagnosis configuration and case based reasoning An additional 14 technical papers deal with current topics in knowledge based systems with an equal emphasis on methods and applications They are selected from more than 50 papers accepted in the 4 parallel workshops of XPS 99 a Knowledge Management Organizational Memory and Reuse b various fields of applications c the traditional PuK Workshop planning and configuration and d the GWCBR German workshop on case based reasoning The other papers presented at these workshops are not included in this volume but are available as internal reports of W rzburg university together with the exhibition guide that emphasizing tool support for building knowledge based systems

**Practical Knowledge-Based Systems in Conceptual Design** John C. Miles, Carolynne J. Moore, 2012-12-06 Conceptual Design is one of the few areas of Engineering Design where computers have yet to make an impact With the development of Knowledge Based Systems it is now possible to rectify this situation This publication deals with the use of Knowledge Based Systems KBS as tools for conceptual design Included are neglected aspects such as evaluation and user needs Practical Knowledge Based Systems in Conceptual Design is based on the authors experience of developing KBS for use in civil engineering an area of industrial application which is recognised as being one of great potential The methodology has been tried and tested by designers Examples of systems which have been developed to solve specific design problems are included

Gonzalez, Douglas D. Dankel, 1993 Provides comprehensive coverage of both the theory and the practical application of knowledge based systems as a branch of artificial intelligence and bases the discussion of knowledge based systems development on the software engineering life cycle approach **Advanced Information Systems Engineering** Pericles Loucopoulos, 1992-04-29 As humanity approaches the 3rd millennium the sustainability of our present way of life becomes more and more questionable New paradigms for the long term coevolution of nature and civilization are urgently needed in order to avoid intolerable and irreversible modifications of our planetary environment Earth System Analysis is a new scientific enterprise that tries to perceive the earth as a whole a unique system which is to be analyzed with methods ranging from nonlinear dynamics to macroeconomic modelling This book resulting from an international symposium organized by the Potsdam Institute has 2 aims first to integrate contributions from leading researchers and scholars from around the world to provide a multifaceted perspective of what Earth System Analysis is all about and second to outline the scope of the scientific challenge and elaborate the general formalism for a well defined transdisciplinary discourse on this most fascinating issue

**Intelligent Knowledge-Based Systems** Cornelius T. Leondes, 2010-04-28 For most of our history the wealth of a nation was limited by the size and stamina of the work force Today national wealth is measured in intellectual capital Nations possessing skillful people in such diverse areas as science medicine business and engineering produce innovations that drive the nation to a higher quality of life To better utilize these valuable resources intelligent knowledge based systems technology has evolved at a rapid and significantly expanding rate Reflecting the most fascinating AI based research and its broad practical applications intelligent knowledge based systems technology is being utilized by nations to improve their medical care advance their engineering technology and increase their manufacturing productivity as well as play a significant role in a very wide variety of other areas of activity of substantive significance Today in the beginning of the 21st century it is difficult to imagine the development of the modern world without extensive use of the AI information technology that is rapidly transforming the global knowledge based economy as well as entire societies The breadth of the major application areas of intelligent knowledge based systems technology is very impressive These include among other areas Agriculture Business Chemistry Communications Computer Systems Education Electronics Engineering Environment Geology Image Processing Information Management Law Manufacturing Mathematics Medicine Meteorology Military Mining Power Systems Science Space Technology and Transportation The great breadth and expanding significance of this field on the international scene require a multi volume major reference work for an adequately substantive treatment of the subject

**Validating and Verifying Knowledge-based Systems** Uma G. Gupta,1991 This collection of previously published papers brings together state of the art developments in expert system testing The volume is separated into five chapters on expert system validation knowledge base verification development and evaluation case studies and tools and general topics The paper **Journal of the Institution of Engineers (India)**. Institution of Engineers (India). Chemical Engineering Division,Institution of Engineers (India). Electrical Engineering Division,1998 Knowledge Acquisition, Modeling and Management Rudi Studer,2003-06-29 Past Present and Future of Knowledge Acquisition This book contains the proceedings of the 11th European Workshop on Knowledge Acquisition Modeling and Management EKAW 99 held at Dagstuhl Castle Germany in May of 1999 This continuity and the high number of sessions reflect the mature status of the knowledge acquisition community Knowledge Acquisition started as an attempt to solve the main bottleneck in developing expert systems now called knowledge based systems Acquiring knowledge from a human expert Various methods and tools have been developed to improve this process These approaches significantly reduced the cost of

veloping knowledge based systems However these systems often only partially fulfilled the task they were developed for and maintenance remained an unsolved problem This required a paradigm shift that views the development process of knowledge based systems as a modeling activity Instead of simply transferring human knowledge into machine readable code building a knowledge based system is now viewed as a modeling activity A so called knowledge model is constructed in interaction with users and experts This model need not necessarily reflect the already available human expertise Instead it should provide a knowledge level characterization of the knowledge that is required by the system to solve the application task Economy and quality in system development and maintainability are achieved by reusable problem solving methods and ontologies The former describe the reasoning process of the knowledge based system i.e. the algorithms it uses and the latter describe the knowledge structures it uses i.e. the data structures Both abstract from specific application and domain specific circumstances to enable knowledge reuse
