Development Of Mature Walking:

The Development of Mature Walking David Sutherland, Richard Olshen, Edmund Biden, 1988 This important monograph summarizes a comprehensive study on the maturation of walking in normal children Research undertaken at one of the world's leading gait analysis centers involved over 400 studies on a total of nearly 300 children in ten age groups from one to seven years Data are presented on anthropometric measurements tests of developmental progress time distance parameters such as stride length and walking velocity twelve joint angles on each side measured throughout the gait cycle dynamic electromyography of phasic activity in seven lower extremity muscle groups and force measurements including vertical force fore aft shear medial lateral shear and torque At each age composite joint angle graphs and time distance parameters are brought together with film tracings of a representative child in that age group In addition advanced methods of statistical analysis have been applied to the joint angle data to define prediction regions within which ninety five percent of normal children should lie throughout the gait cycle Finally a decision tree is presented from which a fitted age can be inferred for a subject based on non age specific data gathered in a motion analysis lab Practical applications are demonstrated in a chapter devoted to two case studies
