loop neuroprosthetic systems achieve more favorable outcomes for users than equivalent open loop devices. Improvements in task performance, usability, and embodiment have all been reported in systems utilizing some form of feedback. The bidirectional communication between living neurons and artificial devices is the main final goal of those studies. However, closed loop systems are still uncommon in the literature, mostly due to the requirement of multidisciplinary effort. Therefore, through this eBook on closed loop systems for next generation neuroprostheses, we encourage an active discussion among neurobiologists, electrophysiologists, bioengineers, computational neuroscientists, and neuromorphic engineers. This eBook aims to facilitate this process by ordering the 25 contributions of this research in which we highlighted in three different parts: A Optimization of different blocks composing the closed loop system; B Systems for neuromodulation based on DBS, EMG, and SNN; and C Closed loop BMIs for rehabilitation.

In this dictionary, forms of Malian Bamana and Guinean Maninka are included. The polysemy of words is represented in all details; the senses are represented hierarchically. Verbal valencies are indicated throughout and clarified by abundant illustrative examples. Numerous idiomatic expressions are given. Most of the lexemes are provided with etymological information, sources of borrowing or proto-forms, and their reflexes in other Mande languages. The dictionary is oriented toward advanced language learners and professional linguists, but it can be also useful for native speakers of Bamana and Maninka languages.      *The New Werner Twentieth Century Edition of the Encyclopaedia Britannica*, 1906      *Journal of the Royal Army Medical Corps* Great Britain.
