A History of Mathematical Statistics from 1750 to 1930 Anders Hald, 1998-04-22

The long awaited second volume of Anders Hald s history of the development of mathematical statistics Anders Hald s A History of Probability and Statistics and Their Applications before 1750 is already considered a classic by many mathematicians and historians This new volume picks up where its predecessor left off describing the contemporaneous development and interaction of four topics direct probability theory and sampling distributions inverse probability by Bayes and Laplace the method of least

squares and the central limit theorem and selected topics in estimation theory after 1830 In this rich and detailed work Hald carefully traces the history of parametric statistical inference the development of the corresponding mathematical methods and some typical applications Not surprisingly the ideas concepts methods and results of Laplace Gauss and Fisher dominate his account In particular Hald analyzes the work and interactions of Laplace and Gauss and describes their contributions to modern theory Hald also offers a great deal of new material on the history of the period and enhances our understanding of both the controversies and continuities that developed between the different schools To enable readers to compare the contributions of various historical figures Professor Hald has rewritten the original papers in a uniform modern terminology and notation while leaving the ideas unchanged Statisticians probabilists actuaries mathematicians historians of science and advanced students will find absorbing reading in the author's insightful description of important problems and how they gradually moved toward solution

The Science of Sacrifice Susan L. Mizruchi, 1998-05-04 From ritual killings to subtle acts of self denial the practice and rhetoric of sacrifice has a special centrality in modern American literature In a compelling interdisciplinary investigation Susan Mizruchi portrays an episode in American cultural history when the literary movement of realism and the fledgling field of sociology both converged in the belief that sacrifice is basic to sociality This is a book about the fascination that sacrifice held for writers principally Herman Melville Henry James and W E B Du Bois and also for those who articulated the main tenets of modern social theory an inquiry that eventually spans historical events such as public lynchings and the political scapegoating of immigrants a century ago The execution in Billy Budd Sailor the death of Du Bois's first born son in *The Souls of Black Folk* Henry James's preoccupation with renunciation and scapegoating and the self denying working classes of Norris and Stein all illustrate repeated stagings of sacrificial rituals from a Biblical past For Mizruchi the peculiar persistence of this aesthetic construct becomes a guide to a rich theological and social scientific tradition distinctive to the late nineteenth and early twentieth centuries and including such influential works as Smith's *Lectures on the Religion of the Semites* Frazer's *Golden Bough* and Ross's *Sin and Society* The major features of sacrifice its original association with spiritual doubt its function as a form of spiritual economics that sustained divisions between the fortunate and the bereft and its role in fixing boundaries between aliens and kin held strong symbolic value for writers struggling to reconcile faith with rationalism and communal coherence with capitalist expansion Mizruchi eloquently demonstrates how the conceptual power of sacrifice made it a key mediator of cultural change from the decline of sympathy and the significance of race in an emerging multicultural society to the revival of maternal self sacrifice
