**Augmentation of Brain Function: Facts, Fiction and Controversy** Mikhail Lebedev, Ioan Opris, Manuel F. Casanova, 2018-09-14 Volume I entitled Augmentation of Brain Functions Brain Machine Interfaces is a collection of articles on neuroprosthetic technologies that utilize brain machine interfaces BMIs BMIs strive to augment the brain by linking neural activity recorded invasively or noninvasively to external devices such as arm prostheses exoskeletons that enable bipedal walking means of communication and technologies that augment attention In addition to many practical applications BMIs provide useful research tools for basic science Several articles cover challenges and controversies in this rapidly developing field such as ways to improve information transfer rate BMIs can be applied to the awake state of the brain and to the sleep state as well BMIs can augment action planning and decision making Importantly BMI operations evoke brain plasticity which can have long lasting effects Advanced neural decoding algorithms that utilize optimal feedback controllers are key to the BMI performance BMI approach can be combined with the other augmentation methods such systems are called hybrid BMIs Overall it appears that BMI will lead to many powerful and practical brain augmenting technologies in the future

**Brain Function and the Evolution of Cerebral Vascularization** Ernst Scharrer, 1962      **A Practical Synthesis of Brain Function Research with Implications for Education** Judy L. LaCavera, 1985      **Neuropedia | The Deblocking Method** Paulo Sergio Santos Negrete, aka, "Teacher John Chapman", 2021-03-09 Welcome to Neuropedia The Deblocking Method This method accelerates learning 3 to 5 times more than any conventional method It has several positive by products such as psychotherapeutic and psycho hygienic effects in the Suggestopedic environment created in the classroom During my years of teaching English as a Foreign Language I could never accept the fact that my students needed so many years to start speaking a new language with confidence Some others even with years of study and dedication could not develop despite my efforts to create better classes and activities Others had to constantly review the verb to be The results The students were afraid of speaking and learning Many people may ask But how can it be possible to learn effectively in a short time What s the secret Others say That s impossible It is just propaganda But actually we are beings with an incredible power to learn but the Social Suggestive Norms so present in our pedagogical system for centuries dictate how much we can learn and how long we need to But I ask you How did we learn our mother language How could our brain collect organize understand and reproduce words and sentences when we were children No one went to school to learn to speak Our parents or who may have raised us never taught us grammar in order to make us speak We can realize that we are missing something in our system of foreign language teaching It does not use the resources available in our brain mind Our way of teaching in the present is not structured to follow the way the brain receives stores and processes information So why not change the whole system The answer is quite simple Who wants to train teachers Change textbooks and methods How long would it take But the fact is that more scientists are discovering the mysteries of mind and memory We are taking advantage of these

discoveries made centuries and decades ago Researchers have noticed that the current pedagogic system is not the best approach to learn That s why so many so called accelerated learning systems or brain friendly approaches have appeared The main problem is that most of them have never been really tested They have not had a follow up for decades to check if they would be beneficial to the students Neuropedia is a method with a scientific background
