Ping Li, Igor Bloshanskii, Lionel M Ni, S S Pandey, Simon X Yang, 2008-04-25 Wavelet analysis and its applications have become one of the fastest growing research areas in the past several years. Wavelet theory has been employed in many fields and applications such as signal and image processing, communication systems, biomedical imaging, radar, air acoustics, and endless other areas. Active media technology is concerned with the development of autonomous computational or physical entities capable of perceiving, reasoning, adapting, learning, cooperating, and delegating in a dynamic environment. This book consists of carefully selected and received papers presented at the conference and is an attempt to capture the essence of the current state of the art in wavelet analysis and active media technology. Invited papers included in this proceedings include contributions from Prof P Zhang, T D Bui, and C Y Suen from Concordia University, Canada; Prof N A Strelkov and V L Dolnikov from Yaroslavl State University, Russia; Prof Chin Chen Chang and Ching Yun Chang from Taiwan; Prof S S Pandey from R D University, India; and Prof I L Bloshanskii from Moscow State Regional University, Russia.

SIAM Journal on Matrix Analysis and Applications, 1989. Contains research articles on linear algebra with emphasis on applications and numerical procedures. These applications include such areas as Markov chains, networks, signal processing systems, and control theory, mathematical programming, economic and biological modeling, and statistics and operations research.

Mathematical Foundations for Deep Learning. Mehdi Ghayoumi, 2025-08-05. Mathematical Foundations for Deep Learning bridges the gap between theoretical mathematics and practical applications in artificial intelligence (AI). This guide delves into the fundamental mathematical concepts that power modern deep learning, equipping readers with the tools and knowledge needed to excel in the rapidly evolving field of artificial intelligence. Designed for learners at all levels, from beginners to experts, the book makes mathematical ideas accessible through clear explanations, real-world examples, and targeted exercises. Readers will master core concepts in linear algebra, calculus, and optimization techniques, understand the mechanics of deep learning models, and apply theory to practice using frameworks like TensorFlow and PyTorch. By integrating theory with practical application, Mathematical Foundations for Deep Learning prepares you to navigate the complexities of AI confidently. Whether you're aiming to develop practical skills for AI projects, advance to emerging trends in deep learning, or lay a strong foundation for future studies, this book serves as an indispensable resource for achieving proficiency in the field. Embark on an enlightening journey that fosters critical thinking and continuous learning. Invest in your future with a solid mathematical base reinforced by case studies and applications that bring theory to life and gain insights into the future of deep learning.

Combinatorial Algorithms. Donald L. Kreher, Douglas R. Stinson, 2020-09-23. This textbook thoroughly outlines combinatorial algorithms for generation, enumeration, and search. Topics include backtracking and heuristic search methods applied to various combinatorial structures such as combinations, permutations, graphs, and designs. Many classical areas are covered, as well as new research topics not included in most existing texts, such as group algorithms, graph isomorphism, hill climbing, and heuristic search algorithms. This work serves as an exceptional textbook for a

modern course in combinatorial algorithms providing a unified and focused collection of recent topics of interest in the area. The authors synthesizing material that can only be found scattered through many different sources introduce the most important combinatorial algorithmic techniques thus creating an accessible comprehensive text that students of mathematics, electrical engineering and computer science can understand without needing a prior course on combinatorics.
