**Image Processing and Intelligent Computing Systems** Prateek Singhal, Abhishek Verma, Prabhat Kumar Srivastava, Virender Ranga, Ram Kumar, 2023-01-17 There is presently a drastic growth in multimedia data During the Covid 19 pandemic we observed that images helped doctors immensely in the rapid detection of Covid 19 infection in patients There are many critical applications in which images play a vital role These applications use raw image data to extract some useful information about the world around us The quick extraction of valuable information from raw images is one challenge that academicians and professionals face in the present day This is where image processing comes into action Image processing's primary purpose is to get an enhanced image or extract some useful information from raw image data Therefore there is a major need for some technique or system that addresses this challenge Intelligent Systems have emerged as a solution to address quick image information extraction In simple words an Intelligent System can be defined as a mathematical model that adapts itself to deal with a problem's dynamicity These systems learn how to act so an image can reach an objective An Intelligent System helps accomplish various image processing functions like enhancement segmentation reconstruction object detection and morphing The advent of Intelligent Systems in the image processing field has leveraged many critical applications for humankind These critical applications include factory automation biomedical imaging analysis decision econometrics as well as related challenges

**Digital Image Processing** Bernd Jähne, 2013-06-29 This chapter centers around the question of how to represent the information contained in images Together with the next two chapters it lays the mathematical foundations for low level image processing Two key points are emphasized in this chapter First the information contained in images can be represented in entirely different ways The most important are the spatial representation Section 2.2 and wave number representation Section 2.3 These representations just look at spatial data from different points of view Since the various representations are complete and equivalent they can be converted into each other The conversion between the spatial and wave number representation is the well known Fourier transform This transform is an example of a more general class of operations the unitary transforms Section 2.4 Second we discuss how these representations can be handled with digital computers How are images represented by arrays of digital numbers in an adequate way How are these data handled efficiently Can fast algorithms be devised to convert one representation into another A key example is the fast Fourier transform discussed in Section 2.5

**2.2 Spatial Representation of Digital Images**

**2.2.1 Pixel and Voxel Images** constitute a spatial distribution of the irradiance at a plane

**Medical Image Processing** Geoff Dougherty, 2011-07-25 The book is designed for end users in the field of digital imaging who wish to update their skills and understanding with the latest

techniques in image analysis The book emphasizes the conceptual framework of image analysis and the effective use of image processing tools It uses applications in a variety of fields to demonstrate and consolidate both specific and general concepts and to build intuition insight and understanding Although the chapters are essentially self contained they reference other chapters to form an integrated whole Each chapter employs a pedagogical approach to ensure conceptual learning before introducing specific techniques and tricks of the trade The book concentrates on a number of current research applications and will present a detailed approach to each while emphasizing the applicability of techniques to other problems The field of topics is wide ranging from compressive non uniform sampling in MRI through automated retinal vessel analysis to 3 D ultrasound imaging and more The book is amply illustrated with figures and applicable medical images The reader will learn the techniques which experts in the field are currently employing and testing to solve particular research problems and how they may be applied to other problems
