Enterprise Architecture Function Ingo Arnold, 2022-01-03 This book provides a method to plan develop validate or evolve the design of an enterprise architecture function so that it fully meets the organization's needs The reader will benefit from this book in two ways First it provides a structured overview and orientation to the subject of architecture from an

architecture function perspective Second it guides through the process of planning building and operating your own architecture organization based on a generic architecture function blueprint presented in the form of a pattern language offering a structured means for navigating contextualizing combining and composing the architecture function patterns The book is structured in six chapters Chapter 1 Introduction explains the starting position and objectives of the book and introduces key concepts that will be explained further in subsequent chapters Chapter 2 Architecture Function Pattern Language introduces the concepts of pattern pattern catalogue pattern topology and ontology and explains how these concepts are combined to form a pattern language for planning designing and operating an architecture function Next Chapter 3 Architecture Function Context introduces concepts that are crucial for understanding the challenges that an architecture function faces and presents a generic schema for the business organizations and value chain Chapter 4 Architecture Function Challenge looks at an architecture function from a black box perspective and outlines the expectations and requirements that companies place on architecture organizations It discusses the building blocks of an architecture function the services it provides along the enterprise value chain and the quality attributes that enterprises expect from their functions Chapter 5 Architecture Function Constitution then shifts from a black box perspective to a white box perspective and outlines the generic design of an architecture function in order to realize functional and quality related requirements Chapter 6 Pattern Catalogue eventually introduces the pattern catalogue with a total of 48 architecture function patterns These patterns suggest designs for collaboration between the architecture function and enterprise organizations for the elaboration and development of enterprise services along the enterprise value chain or for aligning architecture governance with enterprise governance The book is intended for a broad readership including enterprise domain and solution architects lecturers and students and anyone else interested in understanding the value proposition responsibilities outcomes methods and practices of architecture functions It introduces the basic concepts and theories needed to understand the pattern language presented and the patterns it summarizes

Between Theory and Practice in Architectural Design Alexander Tsigkas, 2024-08-13 *Between Theory and Practice in Architectural Design* Imagination and Interdisciplinarity in the Art of Building examines the intersection of philosophy and practice in architecture exploring life viability and interdisciplinary collaboration and offering practical design insights for all beings This book highlights several key architectural features including a philosophical exploration of life a focus on creating organic spaces and the use of the viable system model VSM for organisational resilience Additionally it emphasises interdisciplinary design thinking and introduces a platform for viable and agile AI assisted design The book provides practical case studies highlighting how theory and practice can be integrated into architectural projects giving architects actionable insights for innovative adaptive and purposeful design By utilising organic design principles and interdisciplinary collaboration readers will gain a transformative understanding of architecture The book encourages the application of the viable system model to enhance organisational viability while promoting

flexibility and viability in design Furthermore architects are encouraged to use logic based and object oriented ontology OOO based AI assisted design approaches due to their ability to evaluate design scenarios quickly This book will be of interest to architects designers and enthusiasts seeking a comprehensive understanding of architecture and professionals in architectural enterprises looking to enhance organisational viability will find value Interdisciplinary collaboration is emphasised throughout the book Students and academics in architecture and related fields will also benefit from its philosophical exploration and practical insights

Pattern-Oriented Software Architecture, A Pattern Language for Distributed Computing Frank Buschmann,Kevlin Henney,Douglas C. Schmidt,2007-04-04 The eagerly awaited Pattern Oriented Software Architecture POSA Volume 4 is about a pattern language for distributed computing The authors will guide you through the best practices and introduce you to key areas of building distributed software systems POSA 4 connects many stand alone patterns pattern collections and pattern languages from the existing body of literature found in the POSA series Such patterns relate to and are useful for distributed computing to a single language The panel of experts provides you with a consistent and coherent holistic view on the craft of building distributed systems Includes a foreword by Martin Fowler A must read for practitioners who want practical advice to develop a comprehensive language integrating patterns from key literature

Software Product Lines Timo Käkölä,Juan Carlos Dueñas,2007-02-07 Between July 1999 and June 2005 a group of European companies research institutes and universities executed the EUREKA ITEA projects ESAPS CAF and FAMILIES on the topic of product line engineering The projects originated from the need of the industry to improve software engineering performance by organizing product development in product lines The results obtained within the projects have been implemented in several large industries e g automotive e business medical systems and mobile phones They involve a radical shift in software construction and production The most important research results of the projects are collected in this book Product line engineering was already applied within industry in the 1980s and presumably earlier In the 1980s good architects in many telecommunications c panies based their architectures on the ideas of David Parnas who published on the subject of program families They were facilitated by the CHILL language widely used by the telecommunications companies This language deploys the same modularity principles as the Modula programming language family Modularity is a crucial ingredient for implementing systems with a component based architecture Being able to compose the products of components is an important mechanism in all product line architectures In the 1990s the product line ideas started to gain ground in other industries Around 1995 the company experiences reached the academia and since then people in companies and academia have collaborated widely on this subject The ESAPS CAF and FAMILIES projects
