Csl 89 Lecture Notes In Computer Science Volume 440:

Mathematical Foundations of Computer Science 1991 Andrzej Tarlecki,1991 This volume contains the proceedings of the 16th International Symposium on Mathematical Foundations of Computer Science MFCS 91 held in Kazimierz Dolny Poland September 9 13 1991 The series of MFCS symposia organized alternately in Poland and Czechoslovakia since 1972 has a long and well established tradition The purpose of the series is to encourage high quality research in all branches of theoretical computer science and to bring together specialists working actively in the area Principal areas of interest in this symposium include software specification and development parallel and distributed computing logic and semantics of programs algorithms automata and formal languages complexity and computability theory and others The volume contains 5 invited papers by distinguished scientists and 38 contributions selected from a total of 109 submitted papers   Computer Science Logic ,1991   *ACM Transactions on Programming Languages and Systems* Association for Computing Machinery,1995   *Artificial Intelligence in Higher Education* Vladimír Mařík,Olga Štěpánková,1990-08-08 This volume presents the written versions of talks delivered at the symposium The advent of AI in Higher Education held in Prague Czechoslovakia October 23 25 1989 Contributions review the current impact of AI on the educational process stressing the problems and needs of universities Particular systems projects and methodologies are de scribed with the aim of gathering and generalizing the experience obtained The latest developments prove that AI offers interesting methods which could be used with success across a wider range in the domain of education The nature and spirit of AI forms a new phenomenon which necessitates reconsidering the whole educational process Papers in this volume describe sophisticated tutoring systems as well as suggestions for new curricula   **Algebraic and Logic Programming** Hélène Kirchner,Giorgio Levi,1992 This volume contains the proceedings of the Third International Conference on Algebraic and Logic Programming held in Pisa Italy September 2 4 1992 Like the two previous conferences in Germany in 1988 and France in 1990 the third conference aims at strengthening the connections betweenalgebraic techniques and logic programming On the one hand logic programming has been very successful during the last decades and more and more systems compete in enhancing its expressive power On the other hand concepts like functions equality theory and modularity are particularly well handled in an algebraic framework Common foundations of both approaches have recently been developed and this conference is a forum for people from both areas to exchange ideas results and experiences The book covers the following topics semantics ofalgebraic and logic programming integration of functional and logic programming term rewriting narrowing and resolution constraintlogic programming and theorem proving concurrent features in algebraic and logic programming languages and implementation issues PUBLISHER S WEBSITE   **Algebraic and Logic Programming** ,1992   *EUROCODE '90* Gerard Cohen,Pascale Charpin,1991-07-24 This book presents a selection of the papers presented at EUROCODE 90 the symposium on coding theory held in Udine Italy November 1990 It gives the state of the art on coding in Europe and ranges from

theoretical top ics like algebraic geometry and combinatorial coding to applications like modulation real space decoding and VLSI implementation The book is divided into eight sections Algebraic codes Combinatorial codes Geometric codes Protection of information Convolutional codes Information theory Modulation Applications of coding Five of the sections are introduced by an invited contribution   **Algorithms and Data Structures** Frank Dehne,Jörg-Rüdiger Sack,Nicola Santoro,1991-07-24 This volume presents the proceedings of the Second Workshop on Algorithms and Data Structures WADS 91 held at Carleton University in Ottawa The workshop was organized by the School of Computer Science at Carleton University The workshop alternates with the Scandinavian Workshop on Algorithm Theory SWAT continuing the tradition of SWAT 88 LNCS Vol 318 WADS 89 LNCS Vol 382 and SWAT 90 LNCS Vol 447 From 107 papers submitted 37 were selected for presentation at the workshop In addition there were 5 invited presentations   **Logic Programming** Christoph Beierle,Lutz Plümer,1995 This text aims at promoting a convergence between the technical challenges of developing advanced software systems and the formal techniques tools and features evolving from the logic programming paradigm It provides contributions towards different apsects of logic programming   **Advances in Logic Programming Theory** Giorgio Levi,1994 Logic programming has emerged over the last 5 years as one of the most promising new programming paradigms and as a very active research area The PROLOG experience has shown that relevant problems in areas such as expert systems deductive databases knowledge representation and rapid prototyping can profitably be tackled by logic programming technology It has also shown that the performance of PROLOG systems can be made comparable with more traditional programming languages by means of sophisticated optimization and implementation of the design of a new class of languages the concurrent logic languages Many recent advances in the theory of logic programs are related to extensions of the basic positive logic language and the related semantic problems The original non monotonic negation as failure rule has been extended in various ways and provided with new declarative characterisations Other new language constructs are constraints which lead to a very important extension of the paradigm which allows us to compute on new domains concurrency and modules and objects This book written by a team of international experts goes beyond the classical theory to discuss the many recent advances for the first time in a systematic form   **Expert Systems in Engineering** Georg Gottlob,Wolfgang Nejdl,1990-09-12 The goal of the International Workshop on Expert Systems in Engineering is to stimulate the flow of information between researchers working on theoretical and applied research topics in this area It puts special emphasis on new technologies relevant to industrial engineering expert systems such as model based diagnosis qualitative reasoning planning and design and to the conditions in which they operate in real time with database support The workshop is especially relevant for engineering environments like CIM computer integrated manufacturing and process automation   *Mathematical Foundations of Computer Science* ,1993   **Information Processing** International Federation for Information Processing,1969   *Information Processing in Medical Imaging* Alan C.F. Colchester,David J.

Hawkes,1991-06-20 The 1991 International Conference on Information Processing in Medical Imaging IPMI 91 is the twelfth in the series and was held in Wye College part of the University of London The purpose of IPMI is to provide a forum for the detailed examination of methodological issues in computing which are at the heart of advances in medical image formation manipulation and interpretation This volume presents the proceedings of IPMI 91 Full length scientific papers describing the latest techniques and results are organized into the following nine sections Image formation and reconstruction Incorporation of priors in tomographic reconstruction Multi modal registration Segmentation specific applications Segmentation multi scale surfaces and topology Anatomical models and variability Factor analysis Rule based systems and learning Image quality display and interaction The volume also includes a set of color plates and a subject index The book provides an up to date account of current work in the expanding and fast moving area of image processing and medical imaging and gives an overview of work at all the key centers researching in this area It will prove an invaluable asset to all researchers working in the area and to the libraries of organizations involved in imaging research **Applied Formal Methods--FM-trends ...** ,1998 **Specification and Validation Methods** Egon Börger,1995 Here is a high level introduction to the methods for specification and validation of computing systems with a description of new developments in addition to state of the art techniques The chapters span the field from the semantics of programming languages and their implementation e g PROLOG C to architecture design VHDL parallel and distributed programs and protocols e g kermit The book is unique for two reasons First it combines an up to date survey with a systematic presentation of recent advances and new ideas and approaches Second its themes range from software to hardware design and the proposed methods are applied to specification and validation of complex real life computing systems Such an approach makes this an important book for researchers and graduate students in computer science and systems programmers *Technology and Foundations* Björn Pehrson,Imre Simon,1994 Paperback The first volume of Information Processing 94 is divided into 2 sections Hardware and Software Technology Theoretical Foundations of Computing The former commences with invited papers discussing the physical limits for computing and communication and examining developments in key areas of hardware and software The following contributed papers are grouped into 6 sessions system design wireless networking user interfaces software distributed systems and networking hardware The second section represents a positive collaboration from within the theoretical community It is split into 6 subsections algorithms and complexity semantics evolving algebras finite automata general purpose parallel computing information based complexity and program speedups in practice and theory These sessions reflect a great coherence on important and active areas of theoretical computer science and produce a dense program in well delimited *Many-sorted Logic and Its Applications* K. Meinke,J. V. Tucker,1993-03-09 Prominent experts present papers which discuss problems regarding this subject Coverage includes case studies in the translation of logics for second order and propositional dynamic logic many sorted algebras and equational logic logical foundations of artificial

intelligence along with a variety of methods that exist to encode information program verification techniques such as Floyd Hoare intermittent assertion and temporal logic of programs   *Logic* Wilfrid Hodges,1996 This book contains twenty one essays by leading authorities on aspects of contemporary logic ranging from foundations of set theory to applications of logic in computing and in the theory of fields In those parts of logic closest to computer science the gap between foundations and applications is often small as illustrated by three essays on the proof theory of non classical logics There are also chapters on the lambda calculus on relating logic programs to inductive definitions on Buechi and Presburger arithmetics and on definability in Lindenbaum algebras Aspects of constructive mathematics discussed are embeddings of Heyting algebras and proofs in mathematical anslysis Set theory is well covered with six chapters discussing Cohen forcing Baire category determinancy Nash Williams theory critical points and the remarkable connection between them and properties of left distributive operations and independent structures The longest chapter in the book is a survey of 0 minimal structures by Lou van den Dries during the last ten years these structures have come to take a central place in applications of model theory to fields and function theory and this chapter is the first broad survey of the area Other chapters illustrate how to apply model theory to field theory complex geometry and groups and how to recover from its automorphism group Finally one chapter applies to the theory of toric varieties to solve problems about many valued logics   **Directory of Published Proceedings** ,1991
