A Shared Table:

Multi Tenancy for Cloud-Based In-Memory Column Databases Jan Schaffner, 2013-07-03 With the proliferation of Software as a Service SaaS offerings it is becoming increasingly important for individual SaaS providers to operate their services at a low cost This book investigates SaaS from the perspective of the provider and shows how operational costs can be reduced by using multi tenancy a technique for consolidating a large number of customers onto a small number of servers Specifically the book addresses multi tenancy on the database level focusing on in memory column databases which are the backbone of many important new enterprise applications For efficiently implementing multi tenancy in a farm of databases two fundamental challenges must be addressed i workload modeling and ii data placement The first involves estimating the shared resource consumption for multi tenancy on a single in memory database server The second consists in assigning tenants to servers in a way that minimizes the number of required servers and thus costs based on the assumed workload model This step also entails replicating tenants for performance and high availability This book presents novel solutions to both problems

Data Management for the Cloud Wolfgang Lehner, Kai-Uwe Sattler, 2013-04-06 The efficient management of a consistent and integrated database is a central task in modern IT and highly relevant for science and industry. Hardly any critical enterprise solution comes without any functionality for managing data in its different forms. Web Scale Data Management for the Cloud addresses fundamental challenges posed by the need and desire to provide database functionality in the context of the Database as a Service DBaaS paradigm for database outsourcing. This book also discusses the motivation of the new paradigm of cloud computing and its impact to data outsourcing and service oriented computing in data intensive applications. Techniques with respect to the support in the current cloud environments, major challenges and future trends are covered in the last section of this book. A survey addressing the techniques and special requirements for building database services are provided in this book as well. **Distributed Database Management Systems** Saeed K.

Rahimi, Frank S. Haug, 2010-07-16 This book addresses issues related to managing data across a distributed database system. It is unique because it covers traditional database theory and current research explaining the difficulties in providing a unified user interface and global data dictionary. The book gives implementers guidance on hiding discrepancies across systems and creating the illusion of a single repository for users. It also includes three sample frameworks implemented using J2SE with JMS, J2EE and Microsoft Net that readers can use to learn how to implement a distributed database management system. IT and development groups and computer sciences software engineering graduates will find this guide invaluable.

Food Saving and Sharing United States Food Administration, Eva March Tappan, 1918 Trust Transfer in Sharing Economy Jingyi Zhang, 2018-11-08 Bachelor Thesis from the year 2017 in the subject Engineering Industrial Engineering and Management grade 1.0 University Karlsruhe TH Institut für Informationswirtschaft und Marketing IISM language English abstract The sharing economy is experiencing explosive growth around the globe in which trust plays a crucial role and builds the foundation of the services. With the rise of the sharing economy and the increasing numbers of cross contextual users, this research aims at the lack of trust transference possibilities across the Peer to Peer applications and has the goal to find out whether and how trust can be transferred between the platforms so that new users do not have to create their reputation from scratch every time they join a new platform. First, this research provides an in depth literature review of trust transfer theories. Secondly, a conceptual research model for the role of the imported trust in the context of the sharing economy is outlined and analysed by proposing and evaluating a questionnaire using structural equation modeling. Throughout the study, a three dimensional scale of trust, i.e. ability, benevolence and integrity, is validated in the context of the sharing economy. The experimental study shows that both the overall and subdimensional trust in the provider is directly

affected by the overall trust in the platform the perceived reputation as well as the perceived social presence The study also provides empirical evidence for the existence of trust transferability The findings show that in addition to the immanent ratings imported ratings also significantly affect the perceived reputation of the provider positively Finally this paper discusses further details of the trust transfer processes and broadens implications for future research
