types of blocking factors and their role in the process of drawing statistical inferences from an experiment A new chapter devoted entirely to repeated measures highlighting its relationship to split plot and split block designs Numerical examples using SAS to illustrate the analyses of data from various designs and to construct factorial designs that relate the results to the theoretical derivations Design and Analysis of Experiments Volume 1 Second Edition is an ideal textbook for first year graduate courses in experimental design and also serves as a practical hands on reference for statisticians and researchers across a wide array of subject areas including biological sciences engineering medicine pharmacology psychology and business
