Duped Timothy R. Levine,2019-11-05 A scrupulous account that overturns many commonplace notions about how we can best detect lies and falsehoods From the advent of fake news to climate science denial and Bernie Madoff's appeal to investors people can be astonishingly gullible Some people appear authentic and sincere even when the facts discredit them and many people fall victim to conspiracy theories and economic scams that should be dismissed as obviously ludicrous This happens because of a near universal human tendency to operate within a mindset that can be characterized as a truth default We uncritically accept most of the messages we receive as honest We all are perceptually blind to deception We are hardwired to be duped The question is can anything be done to militate against our vulnerability to deception without further eroding the trust in people and social institutions that we so desperately need in civil society Timothy R Levine's Duped Truth Default Theory and the Social Science of Lying and Deception recounts a decades long program of empirical research that culminates in a new theory of deception truth default theory This theory holds that the content of incoming communication is typically and uncritically accepted as true and most of the time this is good Truth default allows humans to function socially Further because most deception is enacted by a few prolific liars the so called truth bias is not really a bias after all Passive belief makes us right most of the time but the catch is that it also makes us vulnerable to occasional deceit Levine's research on lie detection and truth bias has produced many provocative new findings over the years He has uncovered what makes some people more believable than others and has discovered several ways to improve lie detection accuracy In Duped Levine details where these ideas came from how they were tested and how the findings combine to produce a coherent new understanding of human deception and deception detection

Detecting Lies and Deceit Aldert Vrij,2000-05-25 Why do people lie and how can lies be detected There is now a substantial psychological literature relating to these fundamental questions and this book reviews the relevant knowledge in detail before focusing on guidelines for best practice in detecting deception Psychological research is now available on individual differences in lying behaviour gender differences age differences and personality There is also interesting research evidence of the ways in which deception is reflected both in real objective non verbal behaviour and also in the perceived non verbal cues which can help or mislead the observer in detecting deception Although the book does include a major survey of the physiological aspects of deception and the polygraph as a method of detection it also includes a thorough review of current knowledge of content analysis and validity assessment of speech and written statements The book ends by discussing how professionals can improve lie detection by focusing on key aspects of the behaviour of the liar and by awareness and

control of their own behaviour Covers all three aspects of deception non verbal cues speech and written statement analysis and physiological responses Focuses on the behaviour and perceptions of the observer which can hinder the process of detection Based on the author s expert review of the research and evidence and on his practical experience and connections with several police forces Without doubt this book is the most important contribution to research and practice in lie detection to be published in years For the first time research about verbal nonverbal and physiological correlates of truth telling and deception are reviewed comprehensively in one text This book will benefit those who have to decide whether people are telling the truth or lying because it both reviews contemporary research and provides practical guidelines Frans Willem Winkel Free University of Amsterdam President EAPL European Association of Psychology and Law This book is aimed at students academics and professionals in psychology criminology policing and law Detecting Truthful and Deceptive Statements in Children and Adults Tanya Lee Lutten,1998 **Detecting Lies and Deceit** Aldert Vrij,2011-08-24 Why do people lie Do gender and personality differences affect how people lie How can lies be detected Detecting Lies and Deceit provides the most comprehensive review of deception to date This revised edition provides an up to date account of deception research and discusses the working and efficacy of the most commonly used lie detection tools including Behaviour Analysis Interview Statement Validity Assessment Reality Monitoring Scientific Content Analysis Several different polygraph tests Voice Stress Analysis Thermal Imaging EEG P300 Functional Magnetic Resonance Imaging fMRI All three aspects of deception are covered nonverbal cues speech and written statement analysis and neuro physiological responses The most common errors in lie detection are discussed and practical guidelines are provided to help professionals improve their lie detection skills Detecting Lies and Deceit is a must have resource for students academics and professionals in psychology criminology policing and law **Proceedings of the 37th Annual Hawaii International Conference on System Sciences** Ralph H.
