Advanced Topics in Term Rewriting Enno Ohlebusch, 2002-04-12 Unlike current survey articles and textbooks here the so called confluence and termination hierarchies play a key role Throughout the relationships between the properties in the hierarchies are reviewed and it is shown that for every implication $X \Rightarrow Y$ in the hierarchies the property X is undecidable for all term rewriting systems satisfying Y Topics covered include the newest techniques for proving termination of rewrite systems a comprehensive chapter on conditional term rewriting systems a state of the art survey of modularity in term rewriting and a uniform framework for term and graph rewriting as well as the first result on conditional graph rewriting *Advances in Logic Based Intelligent Systems* Kazumi Nakamatsu, Jair Minoro Abe, 2005 LAPTEC 2005 promoted the discussion and interaction between researchers and practitioners focused on both theoretical and practical disciplines concerning logics applied to technology with diverse backgrounds including all kinds of intelligent systems having classical or non classical logics as underlying common matters **Processes, Terms and Cycles: Steps on the Road to Infinity** Aart Middeldorp, 2005-12-13 This Festschrift is dedicated to Jan Willem Klop on the occasion of his 60th birthday The volume comprises a total of 23 scientific papers by close friends and colleagues written specifically for this book The papers are different in nature some report on new research others have the character of a survey and again others are mainly expository Every contribution has been thoroughly refereed at least twice In many cases the first round of referee reports led to significant revision of the original paper which was again reviewed The articles especially focus upon the lambda calculus term rewriting and process algebra the fields to which Jan Willem Klop has made fundamental contributions **Functional and Constraint Logic Programming** Herbert Kuchen, 2011-07-12 This book constitutes the refereed conference proceedings of the 20th International Workshop on Functional and Constraint Logic Programming WFLP 2011 held in Odense Denmark in July 2011 as Part of the 13th International Symposium on Principles and Practice of Declarative Programming PPDP 2011 the 22st International Symposium on Logic Based Program Synthesis and Transformation LOPSTR 2011 and the 4th International Workshop on Approaches and Applications of Inductive Programming AAIP 2011 From the 10 papers submitted 9 were accepted for presentation the proceeding The papers cover current research in all areas of functional and logic programming as well as the integration of constraint logic and object oriented programming and term rewriting **Advanced Topics in Artificial Intelligence** Rolf T. submissions They were organized in topical sections as follows Description logics beyond classical logic satisfiability modulo theories term rewrite systems theorem proving specific reasoning procedures and proof checking *Computational Logic* Dov M. Gabbay, Jörg H. Siekmann, John Woods, 2014-12-09 Handbook of the History of Logic brings to the development of logic the best in modern techniques of historical and interpretative scholarship Computational logic was born in the twentieth century and evolved in close symbiosis with the advent of the first electronic computers and the growing importance of computer science informatics and artificial intelligence With more than ten thousand people working in research and development of logic and logic related methods with several dozen international conferences and several times as many workshops addressing the growing richness and diversity of the field and with the foundational role and importance these methods now assume in mathematics computer science artificial intelligence cognitive science linguistics law and many engineering fields where logic related techniques are used inter alia to state and settle correctness issues the field has diversified in ways that even the pure logicians working in the early decades of the twentieth century could have hardly anticipated Logical calculi which capture an important aspect of human thought are now amenable to investigation with mathematical rigour and computational support and fertilized the early dreams of mechanised reasoning Calculus The Dartmouth Conference in 1956 generally considered as the birthplace of artificial intelligence raised explicitly the hopes for the new possibilities that the advent of electronic computing machinery offered logical statements could now be executed on a machine with all the far reaching consequences that ultimately led to logic programming deduction systems for mathematics and engineering logical design and verification of computer software and hardware deductive databases and software synthesis as well as logical techniques for analysis in the field of mechanical engineering This volume covers some of the main subareas of computational logic and its applications Chapters by leading authorities in the field Provides a forum where philosophers and scientists interact Comprehensive reference source on the history of logic **Practical Aspects of Declarative Languages** Michael Hanus, Daniela Inclezan, 2023-01-09 This book constitutes the proceedings of the 25th International Symposium on Practical Aspects of Declarative Languages PADL 2023 which was held in Boston MA USA in January 2023 The 15 full papers and 4 short papers presented in this volume were carefully reviewed and selected from 36 submissions The papers are organized in the following topical sections Functional Programming Logic Programming *Rewriting Techniques and Applications*, 2004 Programming Language Foundations Aaron Stump, 2013-10-22 Stump's Programming Language Foundations is a short concise text that covers semantics equally weighting operational and denotational semantics for several different programming paradigms imperative concurrent and functional Programming Language Foundations provides an even coverage of denotational operational an axiomatic semantics extensions to concurrent and non deterministic versions operational semantics for untyped lambda calculus functional programming type systems and coverage of emerging topics and modern research directions **Implementation of Term Rewriting-based**

Programming Languages Nadia Nedjah, Luiza de Macedo Mourelle, 2003 This book presents new compilation analysis optimisation and evaluation techniques for implementation of lazy functional programming languages on sequential computers As a framework for developing these techniques the authors use the equational language pioneered by O'Donnell Huet and Levy wherein programs consist of functions defined by pattern matching equations of the form pattern template Interpreted as left to right rules *The Bulletin of Symbolic Logic*, 2004

Term Rewriting Systems Terese, 2003-03-20 Term rewriting systems developed out of mathematical logic and are an important part of theoretical computer science They consist of sequences of discrete transformation steps where one term is replaced with another and have applications in many areas from functional programming to automatic theorem proving and computer algebra This 2003 book starts at an elementary level with the earlier chapters providing a foundation for the rest of the work Much of the advanced material appeared here for the first time in book form Subjects treated include orthogonality termination completion lambda calculus higher order rewriting infinitary rewriting and term graph rewriting Many exercises are included with selected solutions provided on the web A comprehensive bibliography makes this book ideal both for teaching and research A chapter is included presenting applications of term rewriting systems with many pointers to actual implementations
