Automated Meteorological Systems, 1975 **Automated Meteorological Systems**, 1975 Automated Meteorological Systems; Proceedings of a WMO Technical Conference Technical conference on automated meteorological systems TECAMS, Washington, 1975, World Meteorological Organization, 1975 The Development of a Fixed Base Automated Weather Sensing and Display System William R. Tahnk, Richard H Lynch, 1978 The Meteorology Division of the Air Force Geophysics Laboratory developed a computer based observing system called MAWS Modular Automated Weather System to demonstrate the feasibility of automated observing and forecasting techniques using low cost microcomputers Scott AFB Illinois was chosen as the demonstration site and operation commenced in January 1977 Instrumentation at five observing sites is polled periodically each minute and then the data are transmitted on command to the central site over voice grade telephone lines using microcomputers that were designed built and programmed by the authors This use of on site processing eliminated the need for expensive high speed lines as well as centralized processing Instead a microcomputer in the base weather station acts as a supervisor to the four on site microcomputers directing the flow of information throughout the network Parameters observed automatically include wind temperature visibility pressure and cloud base height In addition short range forecasts of visibility and cloud base height are generated These data are then displayed on alphanumeric display devices located in operations centers around the base MAWS data are also continually archived and the capability exists for hard copy printout when desired Author Automated Meteorological Systems, 1975 **Scientific and Technical Aerospace Reports**, 1976 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database **StarBriefs Plus** Andre Heck, 2004-04-30 With about 200 000 entries StarBriefs Plus represents the most comprehensive and accurately validated collection of abbreviations acronyms contractions and symbols within astronomy related space sciences and other related fields As such this invaluable reference source and its companion volume StarGuides Plus should be on the reference shelf of every library organization or individual with any interest in these areas Besides astronomy and associated space sciences related fields such as aeronautics aeronomy astronautics atmospheric sciences chemistry communications computer sciences data processing education electronics engineering energetics environment geodesy geophysics information handling management mathematics meteorology optics physics remote sensing and so on are also covered when justified Terms in common use and or of general interest have also been included where appropriate Automated Meteorological Systems, 1980 **Automated Meteorological Systems** World Meteorological Organization. Secretariat, 1975 **A Demonstration Test of the Modular Automated Weather System (MAWS)** Donald A. Chisholm, 1980 A microprocessor based automated airfield weather observing and forecasting system called MAWS Modular Automated Weather System was developed to demonstrate the feasibility of modernizing many of the observing and

forecasting functions performed in operational base weather stations Scott Air Force Base Illinois was chosen as the demonstration site and operations were conducted from January 1977 through January 1979 Weather sensors at five observation sites around the airfields were polled several times each minute the data transmitted over commercial voice grade telephone lines to a central supervisory microprocessor where the data were suitably collated averaged and formatted for display on alpha numeric display devices at key locations and for magnetic tape archiving for post analysis The demonstration confirmed that modernized weather support can be largely achieved with state of the art commercially available hardware software Such a system would be compatible with other automation efforts in civilian weather services and other C cubed efforts in the DOD The advantage of spatially and temporally detailed weather information in marginal and adverse situations was documented Sensor siting considerations were addressed in relation to specific weather elements and observational requirements The contributions of automated met watch procedures and short range guidance forecasts of RVR landing minima were demonstrated Feedback on system performance and acceptability was obtained from cognizant AWS offices
