Automorphic Forms And Representations:

Automorphic Forms and Representations Daniel Bump,1997 **Automorphic Forms** Anton Deitmar,2012-08-29
Automorphic forms are an important complex analytic tool in number theory and modern arithmetic geometry They played for example a vital role in Andrew Wiles s proof of Fermat s Last Theorem This text provides a concise introduction to the world of automorphic forms using two approaches the classic elementary theory and the modern point of view of adeles and representation theory The reader will learn the important aims and results of the theory by focussing on its essential aspects and restricting it to the base field of rational numbers Students interested for example in arithmetic geometry or number theory will find that this book provides an optimal and easily accessible introduction into this topic **Representation Theory and Automorphic Forms** Toshiyuki Kobayashi,Wilfried Schmid,Jae-Hyun Yang,2007-10-10 This volume uses a unified approach to representation theory and automorphic forms It collects papers written by leading mathematicians that track recent progress in the expanding fields of representation theory and automorphic forms and their association with number theory and differential geometry Topics include Automorphic forms and distributions modular forms visible actions Dirac cohomology holomorphic forms harmonic analysis self dual representations and Langlands Functoriality Conjecture Both graduate students and researchers will find inspiration in this volume [Automorphic Forms, Representation Theory and Arithmetic](#) G. This volume uses a unified approach to representation theory and automorphic forms. It collects papers written by leading mathematicians that track recent progress in the expanding fields of representation theory and automorphic forms and their association with number theory and differential geometry. Topics include Automorphic forms and distributions, modular forms, visible actions, Dirac cohomology, holomorphic forms, harmonic analysis, self dual representations, and Langlands Functoriality Conjecture. Both graduate students and researchers will find inspiration in this volume.

Automorphic Forms, Representations and Alpha-functions Armand Borel, Proceedings of Symposia in Pure Mathematics, Volume 33, Part 1 A. Borel, W. Casselman, **Automorphic Forms on Adele Groups** Stephen S. Gelbart, 1975-03-21 This volume investigates the interplay between the classical theory of automorphic forms and the modern theory of representations of adèle groups. Interpreting important recent contributions of Jacquet and Langlands the author presents new and previously inaccessible results and systematically develops explicit consequences and connections with the classical theory. The underlying theme is the decomposition of the regular representation of the adèle group of GL_2 . A detailed proof of the celebrated trace formula of Selberg is included with a discussion of the possible range of applicability of this formula. Throughout the work the author emphasizes new examples and problems that remain open within the general theory.

Collected Works of Herve Jacquet Hervé Jacquet, D. Goldfeld, 2011 Herve Jacquet is one of the founders of the modern theory of automorphic representations and their associated L functions. This volume represents a selection of his most influential papers not already available in book form. The volume contains papers on the L function attached to a pair of representations of the general linear group. Thus it completes Jacquet's papers on the subject joint with Shalika and Piatetski-Shapiro that can be found in the volume of selected works of Piatetski-Shapiro. In particular two often quoted papers of Jacquet and Shalika on the classification of automorphic representations and a historically important paper of Gelbart and Jacquet on the functorial transfer from GL_2 to GL_3 are included. Another series of papers pertains to the relative trace formula introduced by Jacquet. This is a variant of the standard trace formula which is used to study the period integrals of automorphic forms. Nearly complete results are obtained for the period of an automorphic form over a unitary group.

Cohomology of Arithmetic Groups and Automorphic Forms Jean-Pierre Labesse, Joachim Schwermer, 1990 Expansions of talks given at the conference held May 1989 Marseilles France. Topics include modular symbols, Eisenstein series and cohomology, finiteness theorems for ball lattices, Hilbert

Representations and L-Functions for the General Linear Group: Dorian Goldfeld, Joseph Hundley, 2011-04-21 This graduate
level textbook provides an elementary exposition of the theory of automorphic representations and L functions for the
general linear group in an adelic setting The authors keep definitions to a minimum and repeat them when reintroduced so
that the book is accessible from any entry point and with no prior knowledge of representation theory They also include
concrete examples of both global and local representations of GL_n and present their associated L functions The theory is
developed from first principles for GL_1 then carefully extended to GL_2 with complete detailed proofs of key theorems
Several of the proofs are here presented for the first time including Jacquet's simple and elegant proof of the tensor product
theorem Finally the higher rank situation of GL_n is given a detailed treatment Containing numerous exercises this book will
motivate students and researchers to begin working in this fertile field of research
