Current Topics In Cellular Regulation Volume 28:

Current Topics in Cellular Regulation Bernard L. Horecker, Earl R. Stadtman, 2014-06-28 Current Topics in Cellular Regulation Volume 28 is a collection of papers that deals with enzyme enzyme interactions regulation of metabolic reaction pathways the relevance of intracellular amino acid pool in the regulation of protein metabolism and the production of superoxide by phagocytic leukocytes Other papers discuss the regulation of adrenergic receptor function by phosphorylation a membrane bound metallo endopeptidase meprin as well as the covalent modification as a mechanism of marking proteins for degradation One paper notes that the transfer pathway involving enzyme enzyme recognition is associated with molecular specificity features over those demanded by the molecular structural constraints of the individual enzyme sites The Albery and Knowles principle under certain conditions shows that intermediary metabolites within a particular pathway exist in states of nearly equal free energy One paper describes that the amino acid pool size and content are governed by the conditioning of intracellular proteins and the metabolic activity of the cell The paper also suggests that intracellular pools do not regulate protein metabolism The collection can prove beneficial for biochemists micro biologists cellular researchers and academicians involved in the study of cellular biology or physiology

Seventeenth Symposium on Biotechnology for Fuels and Chemicals Charles E. Wyman, Brian H. Davison, 2012-12-06 In the Seventeenth Symposium on Biotechnology for Fuels and Chemicals leading researchers from academia industry and government present state of the art papers on how bioengineering can be used to produce fuels and chemicals competitively This year s program covered topics in thermal chemical and biological processing applied biological processing bioprocessing research process economics and commercialization and environmental biotechnology The ideas and techniques described will play an important role in developing new biological processes for producing fuels and chemicals on a large scale and in reducing pollution waste disposal problems and the potential for global climate change

Books in Print Supplement ,1994 *Fatty Acid Metabolism and its Regulation* ,1984-01-01 **Fatty Acid Metabolism and its Regulation** **Allosteric Enzymes** Guy Herve, 2020-11-25 This book compiles detailed information concerning a dozen of the best known allosteric enzymes and so allows the comparison of their regulatory mechanisms and the confrontation of these mechanisms with the theoretical models Stimulating and unexpected ideas emerge from these comparisons and emphasize the importance of developing various methods of investigation such as crystallography X ray solution scattering and the study of fast movements in proteins and site directed mutagenesis This book is addressed to students and researchers interested in structure function relationship in proteins enzymology and metabolic regulation It is also a basis for teaching *Books in Print* ,1994

Biomembranes Gheorghe Benga, Joseph M. Tager, 2012-12-06 Membrane research holds a central position in cell and molecular biology In recent years it has become clear that the study of membranes at the molecular level is of great importance not only to decipher all cellular processes but also to understand the alterations leading to abnormal cells

including cancer cells and or to understand the action of various drugs This book covers the multidisciplinary approach of research in this area and the permanent need for information regarding recent advances It will serve both workers studying basic aspects of membrane structure and function as well as medically oriented scientists The selection of topics illustrating interconnections between basic and applied membrane biology will cross fertilize research in both groups

Functional Metabolism Kenneth B. Storey, 2005-02-25 *Functional Metabolism of Cells* is the first comprehensive survey of metabolism offering an in depth examination of metabolism and regulation of carbohydrates lipids and amino acids It provides a basic background on metabolic regulation and adaptation as well as the chemical logic of metabolism and covers the interrelationship of metabolism to life processes of the whole organism The book lays out a structured approach to the metabolic basis of disease including discussion of the normal pathways of metabolism altered pathways leading to disease and use of molecular genetics in diagnosis and treatment of disease It also takes a unique comparative approach in which human metabolism is a reference for metabolism in microorganisms and plant design and presents novel coverage of development and aging and human health and animal adaptation The final chapter reviews the past and future promise of new genetic approaches to treatment and bioinformatics This the most exhaustive treatment of metabolism currently available is a useful text for advanced undergraduates and graduates in biochemistry cell molecular biology and biomedicine as well as biochemistry instructors and investigators in related fields

Acta Physiologica Et Pharmacologica Latino Americana ,1989

The Physiology and Biochemistry of Prokaryotes David White, 2007 Describes a range of topics of interest to microbiologists these include the structure physiology and biochemistry of bacteria as well as cell cell signaling microbial development and biofilm formation The notes at the end of each chapter provide information on the topics discussed in the chapter
