Descriptive Geometry It has been the endeavor of the author in writing this text to include only those portions of descriptive
geometry which possess industrial utility and which develop the qualities of mind so essential in a draftsman First and
foremost descriptive geometry should aim to teach projection A draftsman must be able both to read and to write drawings
with facility and projection is the very grammar of the language of the designer Secondly descriptive geometry should aim to
develop the ability to solve problems concerning the relations of points lines and planes These are of course but elementary
parts of all engineering structures as shown on drawings and it is important that a draftsman be prepared to solve problems
relating to them directly on the drawing board Thirdly and perhaps most important of all descriptive geometry should aim to
promote the ability to analyse a problem into its component parts to reason from a given set of conditions to a required set of
conclusions and to build up from the drawing a mental picture of the object which is there represented for without the ability
to analyse to reason and to visualize a draftsman is lacking in the essential qualifications of his calling For these reasons the
subject has been discussed from the point of view of a draftsman and the essential relations of points lines and planes have
been treated in the third quadrant The order of the material has been carefully considered and while there is some departure
from traditional arrangement it is believed that the selection of material and its arrangement will be found both logical and
conducive to a natural development of the subject Many problems of a carefully graded character and of a practical flavor
have been inserted at frequent intervals in the belief that such work is invaluable in fixing principles and promoting genuine

Architecture Henry F. Armstrong, 2015-06-26 Excerpt from Descriptive Geometry for Students in Engineering Science and Architecture A Carefully Graded Course of Instruction Section 1 In Descriptive Geometry the object is chiefly to prepare drawings as follows Those which will display or describe by different views any object or arrangement of lines or figures discussed b Those which will by various analytical and constructive methods and operations discover or disclose facts as to shapes inclinations appearances sizes etc and c Those which will represent planes and how they may be disposed to one another The views mentioned above in a are projections and are made on what are called planes of projection The same projection planes two in number are also made use of in the discussion of planes referred to in c lines being drawn over the planes of projection and made to represent other planes in various attitudes with respect to the projection planes The planes of projection are the Horizontal Plane and the Vertical Plane These are considered as being fixed and the lines planes figures or objects are considered as having a relation to them near or otherwise as to distance inclined or otherwise as to altitude The drawings made either represent points lines figures or objects by views thrown perpendicularly on to these planes of projection the H P and the V P as they are commonly called or they indicate the intersection of the planes of projection by lines and planes About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
