Mobile and Wireless Communications Salma Ait Fares, Fumiyuki Adachi, 2010-01-01 Mobile and wireless communications applications have a clear impact on improving the humanity wellbeing From cell phones to wireless internet to home and office devices most of the applications are converted from wired into wireless communication Smart and advanced wireless communication environments represent the future technology and evolutionary development step in homes hospitals industrial vehicular and transportation systems A very appealing research area in these environments has been the wireless ad hoc sensor and mesh networks These networks rely on ultra low powered processing nodes that sense surrounding environment temperature pressure humidity motion or chemical hazards etc Moreover the radio frequency RF transceiver nodes of such networks require the design of transmitter and receiver equipped with high performance building blocks including antennas power and low noise amplifiers mixers and voltage controlled oscillators Nowadays the researchers are facing several challenges to design such building blocks while complying with ultra low power consumption small area and high performance constraints CMOS technology represents an excellent candidate to facilitate the integration of the whole transceiver on a single chip However several challenges have to be tackled while designing and using nanoscale

CMOS technologies and require innovative idea from researchers and circuits designers While major researchers and applications have been focusing on RF wireless communication optical wireless communication based system has started to draw some attention from researchers for a terrestrial system as well as for aerial and satellite terminals This renewed interested in optical wireless communications is driven by several advantages such as no licensing requirements policy no RF radiation hazards and no need to dig up roads besides its large bandwidth and low power consumption This second part of the book Mobile and Wireless Communications Key Technologies and Future Applications covers the recent development in ad hoc and sensor networks the implementation of state of the art of wireless transceivers building blocks and recent development on optical wireless communication systems We hope that this book will be useful for students researchers and practitioners in their research studies *Dr. Dobb's Journal* ,2005 [JAVA Developer's Journal](#) ,2003 *Mobile Computing* Garg, Kumkum, Mobile Computing is a handy undergraduate book on mobile computing covering all the basic concepts of mobile computing as well as mobile communication The book also deals with newer concepts that have emerged in recent years like Bluetooth Securi [Dr. Dobb's Journal of Software Tools for the Professional Programmer](#) ,2003
