Computer Chess Compendium D. Levy,2014-01-15   Computer Chess Compendium David N. L. Levy,1988 For many years I have been interested in computer chess and have collected almost every learned paper and article on the subject that I could find My files are now quite large and a considerable amount of time effort and expense has been required to build up this collection I have often thought how difficult it must be for many computer chess enthusiasts to acquire copies of articles that they see referenced in some other work Unless one has access to a good reference library the task is almost impossible I therefore decided to try to make available in one volume as many as possible of the most interesting and important articles and papers ever written on the subject Such a selection is naturally somewhat subjective and I hope that I will not offend authors whose works have been excluded In particular I have decided to exclude any material which has appeared in the Journal of the International Computer Chess Association ICCA or in its precursor the ICCA Newsletter The reason is simply that the ICCA itself is in the process of compiling a compendium containing the most important material published in those sources For further information on ICCA membership and publications the reader is invited to contact Professor H 1 van den Herik or Dr Jonathan Schaeffer University of Limburg Computing Science Dcpaitment Department of Computer Science University of Alberta 6200 MD Maastricht Edmonton Netherlands Alberta Canada T6G 2HI   **Computer Chess Compendium** David N. L. Levy,1988 The increase in strength of chess computers over the last ten years has resulted in many books and articles on programming methods and new approaches to analyzing positions In this book important articles have been collected in one volume together with the best games by chess computers including the first five World Microcomputer Championships Every article has been transliterated into algebraic notation and the book is aimed at chess players and computer enthusiasts particularly those with an interest in artifical intelligence   *Computer Games I* David N.L. Levy,2012-12-06 Computer Games I is the first volume in a two part compendium of papers covering the most important material available on the development of computer strategy games These selections range from discussions of mathematical analyses of games to more qualitative concerns of whether a computer game should follow human thought processes rather than a brute force approach to papers which will benefit readers trying to program their own games Contributions include selections from the major players in the development of computer games Claude Shannon whose work still forms the foundation of most contemporary chess programs Edward O Thorpe whose invention of the card counting method caused Las Vegas casinos to change their blackjack rules and Hans Berliner whose work has been fundamental to the development of backgammon and chess games   Chess ,1989   **Advances in Computer Games** H. Jaap van den Herik,Hiroyuki Iida,Ernst A. Heinz,2003-11-30 1 feel privileged that the J jh Advances in Computer Games Conference ACG 10 takes place in Graz Styria Austria It is the frrst time that Austria acts as host country for this major event The series of conferences started in Edinburgh Scotland in 1975 and was then held four times in England three times in The Netherlands and once in Germany

The ACG 10 conference in Graz is special in that it is organised together with the 11th World Computer Chess Championship WCCC the Sth Computer Olympiad CO and the European Union Y outh Chess Championship The 11 th WCCC and ACG 10 take place in the Dom im Berg Dome in the Mountain a high tech space with multimedia equipment located in the Schlossberg in the centre of the city The help of many sponsors large and small is gratefully acknowledged They will make the organisation of this conference a success In particular 1 would like to thank the European Union for designating Graz as the Cultural Capital of Europe 2003 There are 24 accepted contributions by participants from all over the world Europe Japan USA and Canada The specific research results ofthe ACG 10 are expected to tind their way to general applications The results are described in the pages that follow The international stature together with the technical importance of this conference reaffrrms the mandate of the International Computer Games Association ICGA to represent the computer games community   Proceedings ,1994   AI Magazine ,1990   **Deep Blue** Monroe Newborn,Monty Newborn,2003 This book offers a detailed account of IBM s Deep Blue chess program the people who created it and its historic battles with World Chess Champion Garry Kasparov The text examines the progress made by the creators of Deep Blue beginning with the1989 two game match against Kasparov The heroes are IBM researchers Feng hsiung Hsu Murray Campbell and Joe Hoane along with team leader Chung Jen Tan and International Grandmaster Joel Benjamin The text chronicles one of the great technology achievements of the 20th Century It establishes the point in history when mankind s exciting new tool the computer came of age and competed with its human creators in the ultimate intellectual competition a game of chess This book will serve as the premier story documenting that achievement and a milestone in the development of artificial intelligence   **Advances in Computer Games** ,1999   **Deep Blue** Monty Newborn,2013-03-20 s a competitor of the Deep Blue team I had mixed emotions as I A watched their chess playing machine defeat World Chess Cham pion Garry Kasparov during their 1997 Rematch On the one hand it meant that our MIT program Socrates would not be the first program to defeat a human World Chess Champion On the other hand I felt great admiration for the monumental engineering accomplishment that Deep Blue s victory represented and proud for the small part that my own team had played in advancing computer chess research After over 50 years of concerted effort to produce a chess playing machine capable of beating the best human Deep Blue finally attained the goal that so many computer scientists had sought In this entertaining and informative book Monty Newborn chronicles the story of Deep Blue from its origins as Chiptest at Carnegie Mellon University to its winning the Rematch as a top IBM research project You do not have to be a chess player or a computer scientist to enjoy this marvelous tale of man and machine Monty paints the characters of this drama in vivid colors from the technical geniuses CB Hsu Murray Camp bell and Thomas Anantharaman to the visionary manager CJ Tan As only an insider can Monty recreates the excitement of the event including the IBM marketing hype and the marvelous compendium of editorial cartoons   **Eighth Annual Computer Game Developers Conference Proceedings** ,1994   *Whitaker's Books in Print*
