## **Computational Complexity Of Sequential And Parallel Algorithms:**

Computational Complexity of Sequential and Parallel Algorithms Lydia Kronsjö, Lydia I. Kronsjö, 1986-04-24 Presents a concise treatment of important results from the theory and application of sequential algorithms and introduces parallel algorithms Allows the reader to compare contrast and appreciate unique features of the computing environment Presents important achievements in design methodology of sequential algorithms Introduces new solutions in the field of parallel algorithms *COMPUTATIONAL COMPLEXITY OF SEQUENTIAL AND PARALLEL ALGORITHMS*, 1985 Parallel Processing and Parallel Algorithms Seyed H Roosta, 2012-12-06 Motivation It is now possible to build powerful single processor and multiprocessor systems and use them efficiently for data processing which has seen an explosive expansion in many areas of computer science and engineering One approach to meeting the performance requirements of the applications has been to utilize the most powerful single processor system that is available When such a system does not provide the performance requirements pipelined and parallel processing structures can be employed The concept of parallel processing is a departure from sequential processing In sequential computation one processor is involved and performs one operation at a time On the other hand in parallel computation several processors cooperate to solve a problem which reduces computing time because several operations can be carried out simultaneously Using several processors that work together on a given computation illustrates a new paradigm in computer problem solving which is completely different from sequential processing From the practical point of view this provides sufficient justification to investigate the concept of parallel processing and related issues such as parallel algorithms Parallel processing involves utilizing several factors such as parallel architectures parallel algorithms parallel programming languages and performance analysis which are strongly interrelated In general four steps are involved in performing a computational problem in parallel The first step is to understand the nature of computations in the specific application domain
