Current Progress In Hyperbolic Systems:

Current Progress in Hyperbolic Systems W. Brent Lindquist, 1989
Riemann Problems and Computations W. Brent Lindquist, 1989 Contains the proceedings of the AMS IMS SIAM Joint Summer Research Conference on Current Progress in Hyperbolic Systems Riemann Problems and Computations held at Bowdoin College in July 1988
Modeling and Analysis of Diffusive and Advective Processes in Geosciences William Edward Fitzgibbon, Mary Fanett Wheeler, 1992-01-01 Not a collection of proceedings but 11 papers on topics that emerged from a September 1989 conference in Houston on mathematical and computational issues in geophysical fluid and solid mechanics The discussions include a semi linear heat equation subject to the specification of energy an analytic
Computation and Applied Mathematics , 1992
Partial Differential Equations III Michael Taylor, 2013-11-11 Partial differential equations is a many faceted subject Created to describe the mechanical behavior of objects such as vibrating strings and blowing winds it has developed into a body of material that interacts with many branches of mathematics such as differential geometry complex analysis and harmonic analysis as well as a ubiquitous factor in the description and elucidation of problems in mathematical physics This work is intended to provide a course of study of some of the major aspects of PDE It is addressed to readers with a background in the basic introductory graduate mathematics courses in American universities elementary real and complex analysis differential geometry and measure theory Chapter 1 provides background material on the theory of ordinary differential equations ODE This includes both very basic material on topics such as the existence and uniqueness of solutions to ODE and explicit solutions to equations with constant coefficients and relations to linear algebra and more sophisticated results on flows generated by vector fields connections with differential geometry the calculus of differential forms stationary action principles in mechanics and their relation to Hamiltonian systems We discuss equations of relativistic motion as well as equations of classical Newtonian mechanics There are also applications to topological results such as degree theory the Brouwer fixed point theorem and the Jordan Brouwer separation theorem In this chapter we also treat scalar first order PDE via Hamilton Jacobi theory
Flow in Porous Media Jim Douglas (Jr.), Ulrich Hornung, 1993 The papers deal with aspects of modeling mathematical theory numerical methods and applications in the engineering sciences
Partial Differential Equations III Michael E. Taylor, 2010-11-02 The third of three volumes on partial differential equations this is devoted to nonlinear PDE It treats a number of equations of classical continuum mechanics including relativistic versions as well as various equations arising in differential geometry such as in the study of minimal surfaces isometric imbedding conformal deformation harmonic maps and prescribed Gauss curvature In addition some nonlinear diffusion problems are studied It also introduces such analytical tools as the theory of L Sobolev spaces Holder spaces Hardy spaces and Morrey spaces and also a development of Calderon Zygmund theory and paradifferential operator calculus The book is aimed at graduate students in mathematics and at professional mathematicians with an interest in

partial differential equations mathematical physics differential geometry harmonic analysis and complex analysis

Nonlinear PDE's, Dynamics and Continuum Physics J. L. Bona, Katarzyna Saxton, Ralph Saxton, 2000 This volume contains the refereed proceedings of the conference on Nonlinear Partial Differential Equations Dynamics and Continuum Physics which was held at Mount Holyoke College in Massachusetts from July 19th to July 23rd 1998 Models examined derive from a wide range of applications including elasticity thermoviscoelasticity granular media fluid dynamics gas dynamics and conservation laws Mathematical topics include existence theory and stability instability of traveling waves asymptotic behavior of solutions to nonlinear wave equations effects of dissipation mechanisms of blow up well posedness and regularity and fractal solutions The text will be of interest to graduate students and researchers working in nonlinear partial differential equations and applied mathematics

Geometric Optics for Surface Waves in Nonlinear Elasticity Jean-François Coulombel, Mark Williams, 2020-04-03 This work is devoted to the analysis of high frequency solutions to the equations of nonlinear elasticity in a half space The authors consider surface waves or more precisely Rayleigh waves arising in the general class of isotropic hyperelastic models which includes in particular the Saint Venant Kirchhoff system Work has been done by a number of authors since the 1980s on the formulation and well posedness of a nonlinear evolution equation whose exact solution gives the leading term of an approximate Rayleigh wave solution to the underlying elasticity equations This evolution equation which is referred to as the amplitude equation is an integrodifferential equation of nonlocal Burgers type The authors begin by reviewing and providing some extensions of the theory of the amplitude equation The remainder of the paper is devoted to a rigorous proof in 2D that exact highly oscillatory Rayleigh wave solutions u to the nonlinear elasticity equations exist on a fixed time interval independent of the wavelength and that the approximate Rayleigh wave solution provided by the analysis of the amplitude equation is indeed close in a precise sense to u on a time interval independent of This paper focuses mainly on the case of Rayleigh waves that are pulses which have profiles with continuous Fourier spectrum but the authors method applies equally well to the case of wavetrains whose Fourier spectrum is discrete

Viscous Profiles and Numerical Methods for Shock Waves Michael Shearer, 1991-01-01 One strongly represented theme is the power of ideas from dynamical systems that are being adapted and developed in the context of shock waves
