

The seven primitive crystal systems

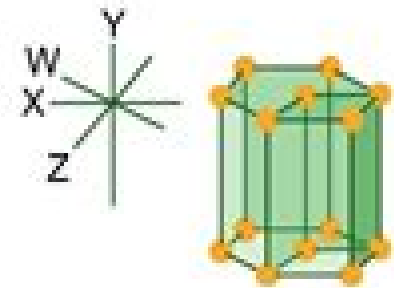

Isometric (or cubic)
All three axes are equal in length, and all are perpendicular to one another.

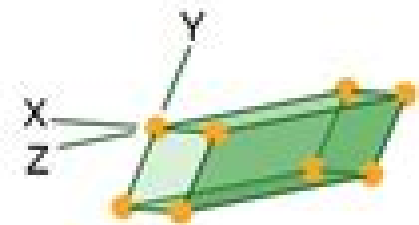

Tetragonal
Two of the three axes are equal in length, and all three axes are perpendicular to one another.

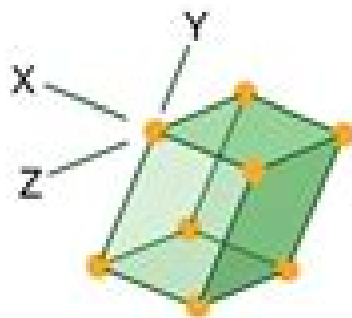

Orthorhombic
All three axes are unequal in length, and all are perpendicular to one another.

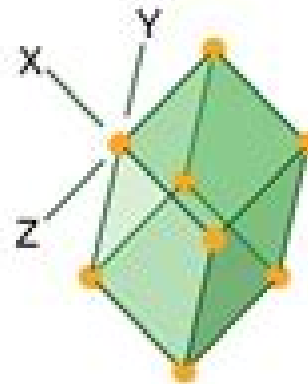

Hexagonal
Of four axes, three are of equal length, are separated by equal angles, and lie in the same plane. The fourth axis is perpendicular to the plane of the other three axes. Hexagonal cells have lattice points in each of the two six-sided faces.

Triclinic
All three axes are unequal in length, and none is perpendicular to another.

Monoclinic
All three axes are unequal in length, and two axes are perpendicular to each other.

Rhombohedral (or trigonal)*
All three axes are of equal length, and none of the axes is perpendicular to another, but the crystal faces all have the same size and shape.

Crystal Physics:

A Text-Book on Crystal Physics W. A. Wooster, 2016-05-26 Originally published in 1938 this textbook was primarily designed for university students to provide a solid grounding in the science of crystal physics Previous knowledge of materials science is considered a prerequisite for the content as well as a solid understanding of physics mathematics and crystallography Throughout this book a two fold purpose has been kept in view to present the classical treatment of the physical properties of crystals in terms of tensor notation and also to indicate the lines of development of modern theoretical and experimental research Chapters are broad in scope detailed and clearly written chapter titles include Conduction Electric induction and Elasticity Multiple diagrams are included throughout for reference Encompassing the increasingly interdisciplinary nature of the subject and its rapid scientific developments this textbook will be of significant value to students of physics as well to anyone with an interest in crystallography geology and the history of education Crystal Physics German Stepanovich Zhdanov, 1965 **Melting and Crystal Structure** Alfred René Ubbelohde, 1965 approach to the study of liquids through the crystalline state of matter and through consideration of what can happen to it on melting Pref **Text-book on Crystal Physics** William Alfred Wooster, 1938 **Problems in Crystal Physics** N.
