Donald Hc 2002:

Index Medicus, 2003 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings *Statistical Methods in Molecular Evolution* Rasmus Nielsen, 2006-05-06 In the field of molecular evolution inferences about past evolutionary events are made using molecular data from currently living species With the availability of genomic data from multiple related species molecular evolution has become one of the most active and fastest growing fields of study in genomics and bioinformatics Most studies in molecular evolution rely heavily on statistical procedures based on stochastic process modelling and advanced computational methods including high dimensional numerical optimization and Markov Chain Monte Carlo This book provides an overview of the statistical theory and methods used in studies of molecular evolution It includes an introductory section suitable for readers that are new to the field a section discussing practical methods for data analysis and more specialized sections discussing specific models and addressing statistical issues relating to estimation and model choice The chapters are written by the leaders of field and they will take the reader from basic introductory material to the state of the art statistical methods This book is suitable for statisticians seeking to learn more about applications in molecular evolution and molecular evolutionary biologists with an interest in learning more about the theory behind the statistical methods applied in the field The chapters of the book assume no advanced mathematical skills beyond basic calculus although familiarity with basic probability theory will help the reader Most relevant statistical concepts are introduced in the book in the context of their application in molecular evolution and the book should be accessible for most biology graduate students with an interest in quantitative methods and theory Rasmus Nielsen received his Ph D from the University of California at Berkeley in 1998 and after a postdoc at Harvard University he assumed a faculty position in Statistical Genomics at Cornell University He is currently an Ole R mer Fellow at the University of Copenhagen and holds a Sloan Research Fellowship His is an associate editor of the Journal of Molecular Evolution and has published more than fifty original papers in peer reviewed journals on the topic of this book From the reviews Overall this is a very useful book in an area of increasing importance Journal of the Royal Statistical Society I find *Statistical Methods in Molecular Evolution* very interesting and useful It delves into problems that were considered very difficult just several years ago the book is likely to stimulate the interest of statisticians that are unaware of this exciting field of applications It is my hope that it will also help the wet lab molecular evolutionist to better understand mathematical and statistical methods Marek Kimmel for the Journal of the American Statistical Association September 2006 Who should read this book We suggest that anyone who deals with molecular data who does not and anyone who asks evolutionary questions who should not ought to consult the relevant chapters in this book Dan Graur and Dror Berel for Biometrics September 2006 Coalescence theory facilitates the merger of population genetics theory with phylogenetic approaches but still there are mostly two camps phylogeneticists and population geneticists Only a few people are moving freely between them Rasmus Nielsen is certainly one of these

researchers and his work so far has merged many population genetic and phylogenetic aspects of biological research under the umbrella of molecular evolution Although Nielsen did not contribute a chapter to his book his work permeates all its chapters This book gives an overview of his interests and current achievements in molecular evolution In short this book should be on your bookshelf Peter Beerli for Evolution 60 2 2006

Ominous Homelands in World Cinema Susana Araújo,2025-09-19 Ominous Homelands in World Cinema examines contemporary films from a range of national settings that expose and critically engage with representations of Homeland a term that resurfaced with renewed intensity in the United States through the establishment of the Department of Homeland Security after 9 11 and gained traction across Europe contributing to the formation of new securitarian configurations whose impact has resonated globally By drawing on contemporary films from different national contexts and relating these with emerging political discourses this book explores some of the new meanings and images associated with ideas of home and land The analysis also traces how notions and representations of Homeland in popular culture have increasingly become infused with themes of security and control not only linked to terrorism but also progressively connected to a number of other global processes such as the so called refugee crisis the emergence of new geopolitical powers wars and the rise of authoritarian leaders and nationalistic movements in different parts of the world This book will be of interest to students and scholars in media and film studies American studies cultural studies critical security studies international relations contemporary history and global studies

Journal of the Royal Agricultural Society of England Royal Agricultural Society of England,1910 *Australian Official Journal of Patents* ,2003 New South Wales Government Gazette ,1892 Foreign Consular Offices in the United States Claitor's Law and Publishing Division,2006-02 *Program of the Annual Meeting - American Historical Association* American Historical Association,2003 Some programs include also the programs of societies meeting concurrently with the association

A History of the Parish of Kitley Glenn J. Lockwood,2004 Key Terms in Material Religion S. Brent Plate,2015-12-17 Material religion is a rapidly growing field and this volume offers an accessible critical entry into these new areas of research Each key term uses case studies and is accompanied by a color image an object practice space or site The entries cut across geographies histories and traditions offering a versatile and engaging text for the classroom Key topics covered include Icon ritual magic gender race Sacred spirit technology Space belief body brain Taste touch smell sound vision Each entry demonstrates in clear and jargon free prose how the key term figures prominently in understanding the materiality of religion Written by leading international scholars all entries are linked by the ways materiality stands at the forefront of the understanding of religion whether that comes from humanistic social scientific artistic curatorial or other perspectives Brent Plate brings his expertise and extensive teaching experience to the comprehensive introduction which introduces students to the themes and methods of the material cultural study of religion Key Terms in Material Religion provides a much needed resource for courses on theory and method in religious studies the anthropology of religion and the ever increasing number
