*Advances in Neural Information Processing Systems 11* Michael S. Kearns, Sara A. Solla, David A. Cohn, 1999 The annual conference on Neural Information Processing Systems NIPS is the flagship conference on neural computation It draws preeminent academic researchers from around the world and is widely considered to be a showcase conference for new developments in network algorithms and architectures The broad range of interdisciplinary research areas represented includes computer science neuroscience statistics physics cognitive science and many branches of engineering including signal processing and control theory Only about 30 percent of the papers submitted are accepted for presentation at NIPS so the quality is exceptionally high These proceedings contain all of the papers that were presented Advances in

Hybridization of Intelligent Methods Ioannis Hatzilygeroudis, Vasile Palade, 2017-10-13 This book presents recent research on the hybridization of intelligent methods which refers to combining methods to solve complex problems It discusses hybrid approaches covering different areas of intelligent methods and technologies such as neural networks swarm intelligence machine learning reinforcement learning deep learning agent based approaches knowledge based system and image processing The book includes extended and revised versions of invited papers presented at the 6th International Workshop on Combinations of Intelligent Methods and Applications CIMA 2016 held in The Hague Holland in August 2016 The book is intended for researchers and practitioners from academia and industry interested in using hybrid methods for solving complex problems Modelling Natural Action Selection Anil K. Seth, Tony J. Prescott, Joanna J. Bryson, 2011-11-10 Action

selection is the task of doing the right thing at the right time It requires the assessment of available alternatives executing those most appropriate and resolving conflicts among competing goals and possibilities Using advanced computational modelling this book explores cutting edge research into action selection in nature from a wide range of disciplines from neuroscience to behavioural ecology and even political science It delivers new insights into both detailed and systems level attributes of natural intelligence and demonstrates advances in methodological practice Contributions from leading researchers cover issues including whether biological action selection is optimal neural substrates for action selection in the vertebrate brain perceptual selection in decision making and interactions between group and individual action selection This first integrated review of action selection in nature contains a balance of review and original research material consolidating current knowledge into a valuable reference for researchers while illustrating potential paths for future studies

*Reinforcement Learning* Marco Wiering, Martijn van Otterlo, 2012-03-05 Reinforcement learning encompasses both a science of adaptive behavior of rational beings in uncertain environments and a computational methodology for finding optimal behaviors for challenging problems in control optimization and adaptive behavior of intelligent agents As a field reinforcement learning has progressed tremendously in the past decade The main goal of this book is to present an up to date series of survey articles on the main contemporary sub fields of reinforcement learning This includes surveys on partially observable environments hierarchical task decompositions relational knowledge representation and predictive state representations Furthermore topics such as transfer evolutionary methods and continuous spaces in reinforcement learning are surveyed In addition several chapters review reinforcement learning methods in robotics in games and in computational neuroscience In total seventeen different subfields are presented by mostly young experts in those areas and together they truly represent a state of the art of current reinforcement learning research Marco Wiering works at the artificial intelligence department of the University of Groningen in the Netherlands He has published extensively on various reinforcement learning topics Martijn van Otterlo works in the cognitive artificial intelligence group at the Radboud University Nijmegen in The Netherlands He has mainly focused on expressive knowledge representation in reinforcement learning settings

**Memory Systems of the Addicted Brain: The Underestimated Role of Drug-Induced Cognitive Biases in Addiction and Its Treatment** Vincent David, Daniel Béracochéa, Mark E. Walton, 2018-06-08 Drug addiction may be viewed as a form of learning during which strong associations linking actions to drug seeking are expressed as persistent stimulus response habits thereby maintaining a vulnerability to relapse Disrupting cue drug memory could be an efficient strategy to reduce the strength of cues in motivating drug taking behavior Upon reactivation these memories undergo a reconsolidation process that can be blocked pharmacologically providing an opportunity to prevent the powerful control of drug cues on behavior This conceptually elegant approach still calls for more experimental data However an increasing body of evidence suggests that drug taking not only accelerates habit forming but has long lasting effects on interactions between memory

systems eventually leading to a functional imbalance The dorsal part of the striatum plays a critical role in habit procedural learning whereas the hippocampal memory system encodes relationships between events and their later flexible use Both humans and rodents studies support the view that the hippocampus and the dorsal striatum interact in either a cooperative or competitive manner during learning the prefrontal cortex being involved in the selection of an appropriate learning strategy Chronic drug consumption biases normal interactions between these memory systems For instance drug experienced rodents tend to use preferentially striatum dependent learning strategies in navigational tasks These persistent effects seem to occur at cellular neurophysiological and behavioral levels to promote specific striatal dependent forms of learning to the detriment of spatial declarative hippocampal dependent and more flexible types of memory Whether cue sensitive and response learners in contrast to spatial learners could be prone to drug addiction is an intriguing hypothesis which clearly deserves to be further explored A loss of flexibility may be uncovered also by imposing changing rules on the subject such as requiring an attentional shift between different perceptual features of a complex stimulus as in the attentional set shifting task which was recently adapted to rodents Working memory is at risk during transition phases although it remains to be determined whether withdrawal induced alterations are observed also during protracted abstinence Drug induced cognitive biases thus lead to cognitive rigidity which could play a critical yet overlooked role in different phases of addiction acquisition extinction withdrawal and relapse They are also likely to preclude the clinical efficiency of treatments Therefore the aim of this research topic is to provide an overview of the current work investigating the long term impact of drug use on learning and memory processes how multiple memory systems modulate drug seeking behavior as well as how drug induced cognitive biases could contribute to the persistence of addictive behaviors

**Neuroeconomics** Paul W. Glimcher, 2013-08-13 In the years since it first published *Neuroeconomics Decision Making and the Brain* has become the standard reference and textbook in the burgeoning field of neuroeconomics The second edition a nearly complete revision of this landmark book will set a new standard This new edition features five sections designed to serve as both classroom friendly introductions to each of the major subareas in neuroeconomics and as advanced synopses of all that has been accomplished in the last two decades in this rapidly expanding academic discipline The first of these sections provides useful introductions to the disciplines of microeconomics the psychology of judgment and decision computational neuroscience and anthropology for scholars and students seeking interdisciplinary breadth The second section provides an overview of how human and animal preferences are represented in the mammalian nervous systems Chapters on risk time preferences social preferences emotion pharmacology and common neural currencies each written by leading experts lay out the foundations of neuroeconomic thought The third section contains both overview and in depth chapters on the fundamentals of reinforcement learning value learning and value representation The fourth section *The Neural Mechanisms for Choice* integrates what is known about the decision making architecture into state of the art models of how we make choices The

final section embeds these mechanisms in a larger social context showing how these mechanisms function during social decision making in both humans and animals The book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field A clear explanatory style and a single expository voice characterize all chapters making core issues in economics psychology and neuroscience accessible to scholars from all disciplines The volume is essential reading for anyone interested in neuroeconomics in particular or decision making in general Editors and contributing authors are among the acknowledged experts and founders in the field making this the authoritative reference for neuroeconomics Suitable as an advanced undergraduate or graduate textbook as well as a thorough reference for active researchers Introductory chapters on economics psychology neuroscience and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field Detailed chapters on subjects that include reinforcement learning risk inter temporal choice drift diffusion models game theory and prospect theory make this an invaluable reference Published in association with the Society for Neuroeconomics [www neuroeconomics org](http://www.neuroeconomics.org) Full color presentation throughout with numerous carefully selected illustrations to highlight key concepts
