Brain And Values:

Brain and Values Karl H. Pribram, 2018-01-17 This 5th volume of the Appalachian Conference discusses how the brain processes information the role of memory and value and models of creativity It pursues aspects of cognitive neuroscience and behavioral neurodynamics such as the topic of values and quantum distributed processing in the brain *Beyond a World Divided* Erika Erdmann, David Stover, 2000-12 Thinkers as diverse as C P Snow J Bronowski and Carl Sagan have described the rift between the two cultures of science and the humanities as the greatest barrier to solving the many problems threatening today s world During the last two decades of his life Nobel laureate Roger W Sperry best known for his pioneering split brain studies that highlighted the differing aptitudes of the two hemispheres of the human brain turned his energies to this dilemma Sperry s ideas about consciousness challenged the behaviorist orthodoxy that prevailed in psychology in the 1950s and 60s and provided a way of understanding the relationship between brain and mind that not only more accurately reflected reality but also promised a reconciliation between the conflicting claims of hard edged objective fact and the realm of human emotion and subjective experience *Beyond A World Divided* chronicles the neuroscientist s groundbreaking research his efforts to refine and win acceptance for his ideas and his struggle to advance his work despite the onslaught of the degenerative nerve disease that eventually killed him The book concludes by surveying the debate in the psychological and philosophical communities about the impact of Sperry s ideas a debate which still continues **Science & Moral Priority** Roger Sperry, 1985 Hearings United States. Congress Senate, 1956 Quantification in Nuclear Medicine Imaging Ivo Rausch, Michel Koole, 2022-01-20 **Clinical imaging, neurophysiological, neuropathology and neuroethics studies on disorders of consciousness, coma mechanisms, and theories of consciousness: a unifying attempt** Diego Iacono, Manuel Trachsel, Thanh G. Phan , Charlène Aubinet, 2026-03-26 Disorders of consciousness including coma can be induced by various causes both traumatic and non traumatic which disrupt specific anatomical structures of the central nervous system responsible for arousal and awareness This clinical reality raises fundamental questions about the mechanisms underlying consciousness Over the past few decades numerous theories of consciousness have emerged each requiring rigorous experimental validation This validation has proven challenging for the scientific community which seeks to unify measurable physiological aspects of consciousness with clinical outcomes Recent advancements in neuroanatomy and functional imaging have begun to elucidate the primary anatomical sites and processes related to coma mechanisms and disorders of consciousness However these findings also introduce new challenges in redefining prognostic expectations life support tools and rehabilitative treatments alongside emerging neuroethical debates that will likely intensify in the near future This Research Topic aims to collect studies from both clinical and non clinical researchers to provide the most updated and potentially unifying data across the full spectrum of arousal and awareness mechanisms from disorders of consciousness to experimentally verifiable theories of consciousness The goal is to gather robust analyses from researchers dealing with

either clinical or theoretical aspects of disorders of consciousness coma mechanisms and theories of consciousness By doing so we hope to offer readers unifying views or directions for this ultimate frontier of neuroscience Contributions from neuropharmacology and anesthesiology experts are also highly encouraged To gather further insights into the boundaries of this Research Topic we welcome articles addressing but not limited to the following themes Neuroanatomical and functional imaging studies related to disorders of consciousness Experimental validation of theories of consciousness Mechanisms of arousal and awareness in clinical and non clinical settings Prognostic tools and life support systems for patients with disorders of consciousness Rehabilitative treatments for coma and related conditions Neuroethical considerations in the treatment and study of consciousness disorders Contributions from neuropharmacology and anesthesiology in understanding consciousness mechanisms **The Journal of Physiology**, 1906 **Sphingolipids, Sphingolipidoses and Allied Disorders**

Bruno Volk, 2013-04-17 This text contains the scientific contributions to the Fourth International Symposium on Sphingolipids Sphingo lipidoses and Allied Disorders held at the Kingsbrook Jewish Medical Center on October 25 27 1971 These meetings were conducted under the auspices of the Isaac Albert Research Institute of the Kingsbrook Jewish Medical Center and the National Tay Sachs and Allied Diseases Association Inc Four symposia held in 1958 1961 1965 and 1971 were designed to gather the most relevant and innovative of the laboratory and field studies concerned with these hereditary disorders The texts generated by these periodic meetings have mirrored the increasing absorption of the scientific community in the problems of sphingolipid metabolism The first meeting in 1958 consisted of but twelve pre sentations the majority emanating from local laboratories The current sessions contain 48 scientific presentations by scientists from nine countries and demonstrate the increas ingly diversified techniques and approaches employed in the study of these diseases Many of the authors in exploring data on the mucopolysaccharidoses and leucodystrophies as well as the sphingolipidoses have given recognition to those biochemical areas held in common by these otherwise diverse disease processes The problems of prevention and therapy of these diseases have been considered by some of the contributors Laboratory screening procedures designed to detect carriers of the va rious lipidoses are now available and the experiences of some laboratories in this area are summarized within this volume The prospective identification of heterozygotes may indeed become a powerful adjunct in genetic counseling Neurobiology of Human Values Jean-Pierre P. Changeux, Antonio Damasio, Wolf Singer, 2006-03-30 Man has been pondering for centuries over the basis of his own ethical and aesthetic values Until recent times such issues were primarily fed by the thinking of philosophers moralists and theologians or by the findings of historians or sociologists relating to universality or variations in these values within various populations Science has avoided this field of investigation within the confines of philosophy Beyond the temptation to stay away from the field of knowledge science may also have felt itself unconcerned by the study of human values for a simple heuristic reason namely the lack of tools allowing objective study For the same reason researchers tended to avoid the study of feelings or

consciousness until over the past two decades this became a focus of interest for many neuroscientists It is apparent that many questions linked to research in the field of neuroscience are now arising The hope is that this book will help to formulate them more clearly rather than skirting them The authors do not wish to launch a new moral philosophy but simply to gather objective knowledge for reflection
