Auditory Signal Processing Daniel Pressnitzer, Alain de Cheveigne, Stephen McAdams, Lionel Collet, 2006-03-14 This book contains the papers that were presented at the XIIIth International Symposium on Hearing ISH which was held in Dourdan France between August 24 and 29 2003 From its first edition in 1969 the Symposium has had a distinguished tradition of bringing together auditory psychologists and physiologists Hearing science now also includes computational modeling and brain imaging and this is reflected in the papers collected The rich interactions between participants during the meeting were yet another indication of the appositeness of the original idea to confront approaches around shared scientific issues A total of 62 solicited papers are included organized into 12 broad thematic areas ranging from cochlear signal processing to plasticity and perceptual learning The themes follow the sessions and the chronological order of the paper presentations during the symposium A notable feature of the ISH books is the transcription of the discussions between participants A draft version of the book is circulated before the meeting and all participants are invited to make written comments before or during the presentations This particularity is perhaps what makes the ISH book series so valuable as a truthful picture of the evolution of issues in hearing science We tried to uphold this tradition which was all the easier because of the excellent scientific content of the discussions *The Digital Signal Processing Handbook* VIJAY
