Crystallization Processes:

Crystallization Process Systems Alan G. Jones, 2002-04-04 Crystallization Process Systems gives a clear concise balanced and up to date presentation of crystallization and solid liquid separation of the crystalline product The information is presented in a coherent concise and logical sequence based on the fundamentals of particulate crystallization processes as systems By emphasising the analysis design and operation of particulate crystallization processes as systems the reader will be able to make a better judgement about the best cheapest and most effective production method to use Presents a coherent concise and logical sequence based on the fundamentals of particulate crystallization processes as systems Emphasis on the design and optimization of the crystallization processing system

Crystallization Wolfgang Beckmann, 2013-04-01 Crystallization is a natural occurring process but also a process abundantly used in the industry Crystallization can occur from a solution from the melt or via deposition of material from the gas phase desublimation Crystals distinguish themselves from liquids gases and amorphous substances by the long range order of its building blocks that entail the crystals to be formed of well defined faces and give rise to a large number of properties of the solid Crystallization is used at some stage in nearly all process industries as a method of production purification or recovery of solid materials Crystallization is practiced on all scales from the isolation of the first milligrams of a newly synthesized substance in the research laboratory to isolating products on the multi million tonne scale in industry The book describes the breadth of crystallization operations from isolation from a reaction broth to purification and finally to tailoring product properties In the first section of the book the basic mechanisms nucleation growth attrition and agglomeration are introduced It ensures an understanding of supersaturation the driving force of crystallization Furthermore the solubility of the substance and its dependences on process conditions and the various techniques of crystallization and their possibilities and limitations are discussed Last but not least the first part includes an intensive treatment of polymorphism The second part builds on the basics exploring how crystallization processes can be developed either batch wise or continuous from solution or from the melt A discussion of the purification during crystallization serves as a link between the two sections where practical aspects and an insight using theoretical concepts are combined Mixing and its influence on the crystallization as well as the mutual interference of downstream processes with the crystallization are also treated Finally techniques to characterize the crop are discussed The third part of the book is dedicated to accounts of actual developments and of carried out crystallizations Typical pitfalls and strategies to avoid these as well as the design of robust processes are presented

Crystallization: Processes and Applications Garry Hollis,2022-09-13 A solid material whose constituents such as atoms molecules or ions are arranged in a highly ordered microscopic structure is referred to as a crystal The physical transformation of a liquid solution or gas to a crystal is known as crystallization Crystals are formed by phenomena such as precipitation freezing or deposition directly from a gas The occurrence of crystallization involves two major steps namely nucleation and crystal growth Its most prominent application is salt crystallization which is the most cost effective way to produce salt Applications of crystallization involve compound purification and crystal production The book aims to shed light on some of the unexplored aspects of crystallization and the recent researches in this area Also included herein is a detailed explanation of the various concepts and applications of this process This book will serve as a reference to a broad spectrum of readers **Louisiana Planter and Sugar Manufacturer** ,1928 **Sensitive Crystallization Processes** Ehrenfried E. Pfeiffer,1975-12 Dr Ehrenfried Pfeiffer writes Research carried on since 1925 has shown that the formation and arrangement of crystals during the process of crystallization can under certain conditions be greatly influenced by the admixture of various substances Hence from these alterations in form apriori conclusions can be drawn about the qualities and characteristics of the admixture itself This is an essential element in his work of analyzing the health and qualities of human blood as an aid in the process of diagnoses *The Planter and Sugar Manufacturer* ,1928 Crystallization Processes H. purification or recovery of solid materials In recent years a number of new applications have also come to rely on crystallization processes such as the crystallization of nano and amorphous materials The articles for this book have been contributed by the most respected researchers in this area and cover the frontier areas of research and developments in crystallization processes Divided into five parts this book provides the latest research developments in many aspects of crystallization including chiral crystallization crystallization of nanomaterials and the crystallization of amorphous and glassy materials This book is of interest to both fundamental research and also to practicing scientists and will prove invaluable to all chemical engineers and industrial chemists in the process industries as well as crystallization workers and students in industry and academia
